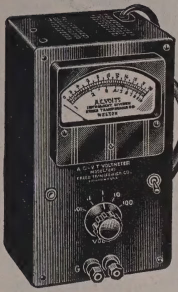
MODEL 1040 A.C.-V.T. VOLTMETER

USES

The type 1040 Vacuum Tube Voltmeter is a high impedance wide frequency range voltmeter which can be used at audio and supersonic frequencies. It is particularly recommended for (1) vibration studies involving very low frequencies, (2) frequency characteristics and gain measurements on amplifiers, (3) transmission losses on telephone circuits: filter and carrier systems up to 250,000 cycles, and (4) acoustic measurements, such as, determination of frequency response of microphones and loudspeakers. Because of the high sensitivity of the instrument, the voltmeter can be advantageously used as a null detector in A.C. bridge measurements. In addition to its use as a voltmeter, the instrument can be used as an ammeter to measure a wide range of currents by connecting it across suitable resistors.



FEATURES

Because of the low input capacity, a high value of input impedance is maintained over the five ranges of the voltmeter. A balanced rectifier, a balanced D.C. amplifier circuit, and a high amount of degeneration throughout the amplifier makes it independent of line voltage variations and changes in tube characteristics. A very important feature of the instrument is the logarithmic voltage scale of the meter. With this type of scale, the percentage accuracy of reading is uniform over the entire scale. Another advantage of the logarithmic scale is that it provides a uniform decibel scale which is a very valuable feature in sound and communication measurements. A zero adjustment and full scale adjustment are provided. These two controls serve for all ranges and no re-setting is necessary when switching from one range to another. The time constant of the instrument is adjusted in order to read very low frequencies of 7 to 10 cycles without any vibration of the needle. The circuit of the meter is arranged so that it can not be burned out by any overload of the instrument. The vacuum tube voltmeter is small, compact, entirely self-contained, A.C. operated.

SPECIFICATIONS

Voltage Ranges: .001 volts to 100 volts in five ranges (.01, .1, 10, and 100 volts full scale).

Accuracy: 2% on full scale on all five ranges, on sinusoidal voltages.

Waveform Error: The instrument is a peak voltmeter calibrated to read RMS values. On distorted waveforms, the percentage deviation of the reading from RMS values may be as large as the percentage of the harmonics present.

Frequency Ranges: 10 to 200,000 cycles, .1 db. variation from 20 cycles to 150,000 cycles: .50 db. variation from 10 cycles to 200,000 cycles.

Input Impedance: Equivalent to 500,000 ohm resistance in parallel with a 15 MMF. condenser.

Stability: Effect of variation in line voltage from 100 volts to 125 volts is 1%. Effect in changes of tubes is less than .5%.

Scale: Logarithmic voltage scale calibrated from 1 to 10 plus a linear decibel scale calibrated from 0 db. to 20 db.

Meter: 4″ suppressed zero 1 MA meter protected against overloads.

Power Supply: The instrument is entirely self-contained and operates on 100-125 volts, 50-60 cycles. Total consumption, 40 Watts.

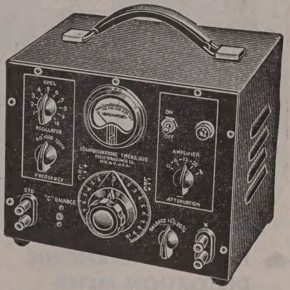
Dimensions: 4⅞″ High x 5⅝″ Wide x 9⅞″ Long.

Weight: 12 pounds.

NO. 1010 COMPARISON AND LIMIT BRIDGE

USES

This instrument is a Comparison and Limit Bridge for use in both laboratory and production testing of resistors, condensers and inductors. The manufacturer of these components can use it for production tests, the user for incoming inspection and acceptance tests. The instrument is particularly useful for laboratory work (bridge or filters) where very accurate components are required.



FEATURES

For precision and production testing, the bridge has many advantages. Power line operation and the visual indicator make the instrument completely self-contained. It can be used in noisy locations. Its small size and light weight permit the instrument to be moved easily and to be set up wherever necessary.

DESCRIPTION

The instrument is composed of an oscillator, a bridge and a selective amplifier. The oscillator output is coupled into the bridge through a shielded isolation transformer. A switch is provided which connects either a high or low impedance winding across the bridge, consisting of two fixed resistors, the unknown impedance and the standard. A variable resistor between the two fixed resistors makes it possible to read the percentage difference between the unknown and the standard on a specially calibrated dial. A high gain selective amplifier indicates the balance of the bridge. The general method of testing is the comparison of an unknown component with a standard component of the same type. Accurate percentage measurements are obtained by the use of precision components in the arms of the bridge. The use of high gain amplifier and adequate internal shielding assures a very sharp and distinct balance.

A visual null indicator, consisting of a meter used in connection with the high gain amplifier makes it possible to use the No. 1010 Bridge as a precision limit bridge in production testing.

PRECISION INSTRUMENTS FOR THE RADIO AND ELECTRONIC INDUSTRY

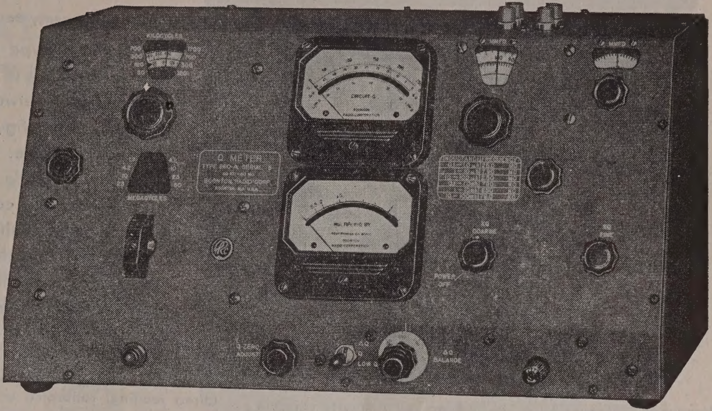
Q-METER

TYPE 260-A

Freq. Range 50 kc. to 50 mc.

Radio frequency circuit design often requires the accurate measurement of Q, inductance, and capacitance values. For this application, the Boonton Radio Q-Meter has become the universal choice of radio and electronic engineers throughout the country.

Each component part and assembly used in the manufacture of this instrument is designed with the utmost care and exactness. Circuit tolerances are held to values attainable only in custom built instruments.



The Type 260-A Q Meter provides a scale for reading low values of Q, as well as a "ΔQ" scale, two paralax-free meters, recessed dials and other desirable features. The beam pentode r.f. oscillator results in good waveform and allows smooth oscillator output variation through screen grid control. The use of a newly developed, low inductance, low resistance injection resistor, a rugged thermocouple running at a comparatively low temperature, and a controlled oscillator output between ranges minimizes the possibility of thermocouple damage. The "LO Q" and "ΔQ" scales greatly facilitate the use of the instrument in measuring the effect on Q resulting from changes in test circuit parameters, as well as allowing closer readings of Q at the lower values.

The symbol Q is commonly used to designate the ratio of reactance to effective resistance of a coil ($Q=2\pi fL/R$) or a condenser ($Q=1/2\pi fCR$). This factor is of fundamental significance in circuit design since it is a "figure of merit" of the reactive elements. By introducing a calibrated r.f. voltage from the self-contained oscillator into the series resonant Q circuit and measuring the voltage across one of the circuit reactances, the ratio of the latter to the applied voltage is the Q of the circuit. The measurement requires a single operation and the circuit Q is read directly on the meter.

PRECISION INSTRUMENTS
FOR THE RADIO AND ELECTRONIC INDUSTRY

FM-AM SIGNAL GENERATOR

TYPE 202-B

Frequency Range 54 mc. to 216 mc.

The type 202-B FM-AM Signal Generator has been developed to meet the needs of engineers engaged in the design of FM and television receivers for operation within the frequency range of from 54 megacycles to 216 megacycles.

This instrument has been proportioned for maximum conservation of laboratory bench space, with frequency dial, modulation and output meters positioned at eyelevel for maximum readability. The unit is finished in grey wrinkle enamel with engraved panel and is supplied complete with tubes and standard output cable.

SPECIFICATIONS

RF Range: Frequencies from 54 mc. to 216 mc. are covered in two ranges, 54-108 mc. and 108-216 mc.
Main Frequency Dial: The two RF ranges are calibrated directly in megacycles to an accuracy of within ± 0.5%. The dial is also divided in 24 equal divisions for use with the vernier frequency dial.

Vernier Frequency Dial: The vernier frequency dial is divided in 100 divisions and is geared to the main dial through a gear train having a 24:1 ratio. The approximate frequency change per vernier division is 26 kc. on the low range and 52 kc. on the high range.

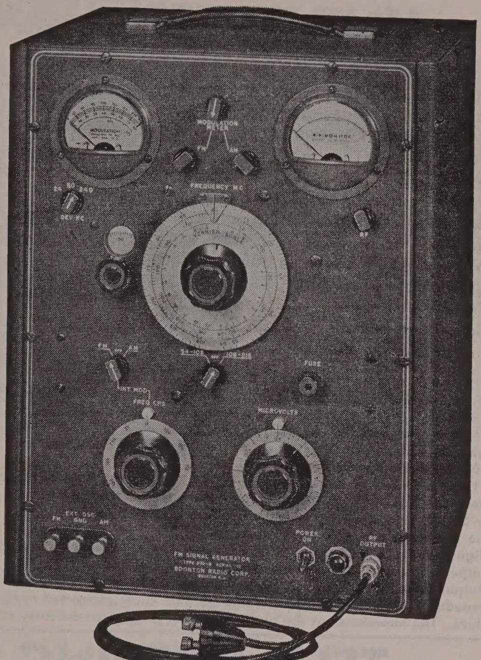
Frequency Modulation (Deviation): The FM deviation is continuously variable from zero to 240 kc. The modulation meter is calibrated in three FM ranges (1) zero to 24 kc., (2) zero to 80 kc. and (3) zero to 240 kc. deviation.

Amplitude Modulation: The modulation meter is calibrated at 30% and 50% amplitude modulation. AM is continuously variable from zero to 50%.

Modulation Controls: Separate potentiometers are provided for continuous control of FM and AM levels.

Modulating Oscillator: The internal AF oscillator may be switched to provide either frequency or amplitude modulation; it may also be switched off. External binding posts permit the use of an external AF oscillator for either FM or AM. Both internal and external AF oscillators may be used simultaneously, thus providing either FM or AM at two modulation frequencies simultaneously or simultaneous FM and AM. The internal AF oscillator provides eight fixed frequencies which may be selected by a rotary type switch—50, 100, 400 cycles and 1, 5, 7.5, 10 and 15 kilocycles, accurate to within 5%. The output voltage of the internal AF oscillator is available at the external binding posts for synchronizing or other purposes.

RF Output Voltage: The RF output voltage is continuously variable over a range from 0.1 microvolt to 0.2 volts at the terminals of the output cable. The impedance at the RF output jack, looking into the instrument, is 53 ohms resistive. The output cable has a 53 ohm resistance termination at the terminal end hence the output impedance of the unit with cable attached is 26.5 ohms.



Distortion: FM distortion at 75 kc. deviation is less than 2% when modulated with the internal AF oscillator or an external AF oscillator having 0.5% distortion or less. At 50% amplitude modulation the distortion is about 5% using the internal AF oscillator and decreases as the modulation percentage is reduced. An external AF oscillator may be employed for amplitude modulation if desired.

Spurious RF Output: All spurious RF output voltages are at least 30 db. below the desired fundamental. The RF leakage is very low.

Fidelity Characteristics: The deviation sensitivity of the FM modulation system as a function of frequency is constant from dc. to over 10 kc. At 15 kc. the deviation as indicated on the modulation meter is 0.5 db. higher than the true value. The amplitude modulation system is also flat from dc. to 10 kc., and departs from nominal by 1.0 db. at 15 kilocycles.

Power Supply: The power supply is self-contained in the instrument for use on 60 cycles, 110 volts.

Accessories: 207A Frequency Converter (Frequency range 0.1 mc. to 55 mc.).

Dimensions: Height: 17"; Width: 13½"; Depth: 11½".

Frequency Range
0.5 to 250 mc.

The RX Meter measures equivalent parallel resistance, capacitance or inductance of two terminal networks over a wide frequency range (0.5 to 250 mc.). The range of measurement for parallel resistance is 15 to 100,000 ohms, for parallel capacitance 0.1 to 120 mmfd and for parallel inductance 0.001 microhenries to 100 millihenries. By indirect methods resistances with values from 0 to 15 ohms can be measured. Resistance values are directly indicated and no corrections are necessary over the frequency range. At higher frequencies small corrections, as indicated in the instruction book, are necessary to obtain the highest accuracy in the measurement of capacitance and inductance. The automatic gain control on the null indicator avoids meter damage and permits indication at all times of the correct direction for adjusting to balance. The low noise high gain amplifier-detector results in high sensitivity near the balance point.

The RX Meter is self-contained requiring no external units for its operation. This feature permitted an integrated design eliminating difficulties arising from leakage, hand effects or improper matching which can occur when several different units must be inter-connected in the laboratory.

The RX Meter Type 250-A has particular application to the measurement of the impedance of unbalanced, two terminal components or networks which require moderate values of capacitance to resonate the reactance present. Measurements can be made on two terminal or three terminal balanced networks by use of one-half wavelength of high quality coaxial cable as a matching element. Networks which require values of capacitance beyond the range of the Cp dial to resonate the reactance can be measured in most cases by use of a high quality auxiliary parallel capacitors or inductors.

All measurements made by the RX Meter are indicated in equivalent parallel values. The equivalent series values can be readily obtained by use of simple formulas included in the Instruction Book.

The RX Meter can be used to determine the parameters of the impedance of resistors over its frequency range, the characteristics of antennas and the characteristic impedance, velocity of propagation and attenuation of transmission lines. It can also be used to determine the characteristics of broad band IF transformers, filters, transistors, attenuators, thermistors, crystal diodes and vacuum tubes.

BUILT-IN RESISTOR

(Patent No. 2,421,321)

All of these assemblies are listed by Underwriters' Laboratories, Inc.

NE-51

For 110 and 220 volts

The new NE-51 lamp is especially useful for pilot lights to be operated on commercial voltages. It has a distinctive orange-red glow and consumes very little current.

MULTI-VUE CAP

In addition to the advantages given by the provision of the built-in resistor, these assemblies offer another feature that is especially important in obtaining effective indication with the NE-51 lamp. The "Multi-vue" cap shown at the right gives a high degree of visibility by directing an increased amount of light toward the eye when the indicator is viewed from any angle. When it is desirable to view the electrodes directly, the clear caps shown below are very effective. For concentrating the light into a beam the metal lens holders are equipped with convex lenses as shown.

A FUSE WITH A LONG TIME-LAG

These fuses avoid needless blows from starting currents or surges. They have a fuse link which operates only on very high overloads or short-circuits — they have a thermal cutout which functions on low overloads — the thermal cutout cannot operate quickly at any load, hence long time-lag is obtained. Yet protection is afforded against short-circuits or continued overloads.

Test specification—carry 110%, open at 135% in 1 hour.

BUSS FUSE CLIPS for ¼ inch Fuses

(SFE 4, 6, 9, 14, 20, AGX, AGC, ABC, MDL, MJB, MTH fuses)

Spring bronze clips are made of Herculoy — a bronze of distinctly superior quality for spring clips. This metal gives clips great gripping strength and ability to retain spring under adverse conditions.

Beryllium copper clips combine low electrical resistance with great gripping strength. This means maximum electrical conductivity and results in cooler operation of clips and fuse.

Other standard and special fuses, fuse blocks and fuse holders

If the fuses, blocks and holders shown do not fit your requirements ask for information on other types.

Fuses and fuse mountings to meet JAN and Military specifications also are available.

If you have a special problem in protection send description or sketch giving number of circuits, type of fuse, terminals, etc., desired. We welcome such inquiries.

BUSS FUSE HOLDERS

Make it convenient to mount fuse on any equipment. Changing or inspection of fuse is easy and quick.

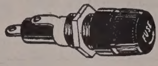
Holder has removable knob. Fuse projects beyond body of holder and is not held tight on other end when knob is removed.

Fuse and contacts are protected from dirt and fumes.

Good contact on fuse is made certain by strong coil spring pressure. Poor contact heating that often causes fuse to blow needlessly is eliminated.

Holder bodies are made of black bakelite. All current carrying parts are of brass or copper. Terminals and all contact parts are bright alloy plated.

PANEL MOUNTED HOLDERS for ¼ inch Fuses



Holders are inserted through hole in panel and are locked in place by nut on holder. They can be used on panels up to 5/16 inch thick.

Bayonet type knob requires only quarter turn to remove fuse. No screw driver is needed.

Side terminal is held mechanically as well as by solder. Heat of soldering wire to it will not cause it to loosen or come off.

Vibration will not cause failure of terminals as they are designed to stand severe service.

Neoprene washer and steel locking nut (zinc plated, chromate dipped) furnished with each holder.

Wire hole in terminals; .115 inch.

Normal current carrying capacity; 15 amperes.

Listed as approved by Underwriters' Laboratories.

IN-THE-LINE HOLDERS for ¼ inch fuses

These holders are for mounting fuse in wire. Holders consist of body and bayonet type knob — two contacts ready to be staked on ends of wire — a pressure spring that is used under contact in base of holder.

Holders can also be mounted in panel up to 5/16 inch thick by means of a No. 9969 Spring nut (Nut not furnished). Flat spot on holder permits it to be locked against rotation.

Normal current carrying capacity: 15 amperes.

313000 Series **Littelfuses**—**Slo-Blo** fuses with high time-lag to withstand heavy surges—quick on shorts. Designed for circuits with equipment having high inductive or capacitative surges, such as magnets, solenoids, etc., and for circuits with heavy starting currents, such as motors and lamp circuits. Anti-fatigue construction (compound element, with spring and resistor) makes these fuses ideal for intermittent-duty circuits on vibrators, control circuits, hi-tension electric fences, small magnets, coils, etc. **"Pioneered by Littelfuse."**

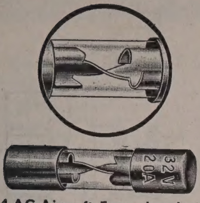
LITTELFUSE "Quicker than a Short Circuit"

AIRCRAFT LITTELFUSES—ANTI-VIBRATION TYPE

Especially designed for Aircraft Service. Characteristics: High Mechanical Strength—Resistance to Fatigue—Long Vibration Life



4 AG Aircraft Fuse showing reinforced twisted element

Bakelite-enclosed 4 AB Fuse

CONSTRUCTION: Glass-enclosed. Littelfuse Locked Cap Assembly (no cements) prevents loosening of caps. High visibility transparent label for amperage. Elements mechanically depolarized by twisting at 90° (see illustrations) are braced against extreme vibration. "Gooseneck" non-crystallizing fuse element takes up expansion and contraction. Ratings 5 amps. or less use Spring and Link. Service life six times simple wire. The 4 AG and 5 AG sizes are supplied for Aircraft tervices for their strength and greater carrying capacity han 3 AG fuses.

BAKELITE-ENCLOSED: 4 AB and 5 AB fuses recommended where severe overloads might shatter glass.

CURRENT RATING: Rated to NEC specifications to carry 10% overload indefinitely, to blow on 35% overload within 1 hr., and 100% overload within 2 min.

VOLTAGE RATING: Voltage at which fuses will break without arcing over, or bursting under short circuit conditions.

VIBRATION FACTOR: Minimum hours these fuses endure our Magnetic Vibrator operating 120 cycles a second, while carrying the rated current. Acceleration is 10 times the worst field conditions.

3AG HV Designed for general application, fuses of the 3AG High Voltage Series blow quickly under overload. They are recommended for the protection of primary circuits connected to house main lines, and may also be used for low voltage circuits where the standard 3AG Low Voltage Series does not list a fuse of the required rating.

PIG-TAILS Fuses of this series may be ordered with pig-tails by adding the symbol "PT" to the catalog number. (EX. 3AG 5H PT—for the 3AG High Voltage Series, 5 amp. fuse with pig-tails.) The pig-tails are 1½" long leads of #20 (.032") AWG tinned copper wire.

*This fuse contains a filler. As such, a blown fuse is not always readily recognizable.

4AG Stand. Fuses of the 4AG Standard Series may be considered a ruggedized version of the corresponding 3AG Series, since these fuses afford greater protection against shock, virbration and rough handling than do the fuses of the 3AG Series. Due also to their heavier design, fuses of the 4AG Standard Series are available in higher ratings up to 40 amps. nominal load. Most of the applications of this series are found in aircraft installations and wherever rugged construction is of major importance.

General's exclusive "Lightning Bolt" link is incorporated into the design of all fuses in this series from 15 amps. up—affording great shock and vibration resistance in that range.

3AG LV Fuses of the 3AG Low Voltage Series blow quickly under overload. Suitable for battery circuits not over 32 volts and other low voltage applications, they are frequently used in portable radios and other equipment of this type. The 15 amp. (and higher) fuses have the exclusive "Lightning Bolt" construction which makes them specially resistant to shock and vibration. For lower ratings, use fuses of the 3AG High Voltage Series.

PIG-TAILS Fuses of this series may be obtained with pig-tails by adding the symbol "PT" to the catalog number. (For example: 3AG 5PT—for the 3AG Low Voltage Series, 5 amp. fuse with pig-tails.) For fuses up to and including 8 amps., pig-tails are 1½" in length of #20 (.032") AWG tinned copper wire. For higher ratings under 20 amps. pig-tail wires are of the same length, but of #16 (.051") AWG tinned copper wire; pig-tails for fuses of 20 amps. and higher are of the same length, but of #14 (.064") AWG tinned copper wire. However, pig-tail fuses of 20 amps. or more are not recommended, particularly if the equipment is subject to shock and vibration during operation.

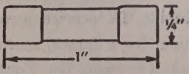
5AG Stand. Fuses of the 5AG Standard Series are similar in application and performance to the corresponding 4AG fuse types, except that they can be supplied with ratings up to 60 amps. 5AG fuses are supplied primarily for aircraft equipment, but may also be used in ground equipment which is subject to heavy shock and vibration.



8AG ¼" x 1" INSTRUMENT SERIES

8AG Fuses of the 8AG Series were designed especially for application in electrical measuring equipment and instruments (i.e., voltmeters, ammeters, milliameters, microammeters, rectifying crystals, plate voltage supply circuits and other electronic equipment), where a quick break under overload conditions is required. They are now used also by some manufacturers of television receivers and other electrical equipment.

PIG-TAILS Fuses of this series may be ordered with pig-tails by adding the symbol "PT" to the catalog number. (EX. 8AG 5 PT—for the 8AG Series, 5 amp. fuse with pig-tails.) For fuses up to and including 5 amps., pig-tails are 1½" in length of #20 (.032") AWG tinned copper wire. 3AG ¼" x 1¼"

TIME-LAG SERIES

3AG TL Fuses of the 3AG Time-lag Series will withstand a limited overload for a length of time, but will blow quickly under a very heavy overload. Though they will blow in less than one hour at 135% of the nominal load, they nevertheless will withstand an overload of 200% of the nominal for at least six seconds. This characteristic makes the fuses of the 3AG Time-lag Series ideal for many applications where the circuit must be protected against a small overload of long duration—at the same time affording positive protection against a very heavy short overload.

Most fuses of this series contain a spring loaded fuse element and as such, are highly resistant to shock, vibration and rough handling.

PIG-TAILS Fuses of this series may be ordered with pig-tails by adding the symbol "PT" to the catalog number. (For example: 3AG ¼TL PT—for the 3AG ¼ amp. time-lag fuse with pig-tails.) For fuses up to and including 8 amps., pig-tails are 1½" in length of #20 (.032") AWG tinned copper wire. For higher ratings under 20 amps., pig-tail wires are of the same length, but of #16 (.051") AWG tinned copper wire; pig-tails for fuses of 20 amps. and higher are of the same length, but of #14 (.064") AWG tinned copper wire. However, pig-tail fuses of 20 amps. or more are not recommended, particularly if the equipment is subject to shock and vibration during operation.

TIME-LAG SERIES

4AG TL Fuses of the 4AG Time-lag Series are far more rugged than the 3AG Time-lag Series, and are especially suitable for use wherever the fuses must stand rough treatment, as in aircraft equipment.

These fuses will withstand a limited overload for a length of time, but will blow quickly under very heavy overload. Though they will blow in less than one hour at 135% of the nominal load, they nevertheless will withstand an overload of 200% of the nominal for at least six seconds. This characteristic makes the fuses of the 4AG Time-lag Series ideal for many applications where the circuit must be protected against a small overload of long duration—at the same time affording positive protection against a very heavy short overload.

Most fuses of this series contain a spring loaded fuse element and as such, are highly resistant to shock, vibration and rough handling.

Standard rectifiers are connected internally according to one of the five circuit diagrams shown.

Series 500, 160 and 160-C are the well known standard line of instrument rectifiers and are constructed to the highest standards of quality. Construction is conventional.

TUA (tubular, axial leads) and TUR (tubular, radial leads) construction is desirable especially in rectifiers designed for high voltage operation. Total enclosure of the stack however limits heat radiation necessitating derating of cells.

ERM (external resilient member) construction insures maintenance of optimum stack pressures regardless of ambient or operating temperatures. Rectifiers in ERM construction are smaller, lighter and cheaper.

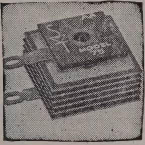
HIGH VOLTAGE SELENIUM RECTIFIERS



Sarkes Tarzian high voltage selenium rectifiers are designed for use in photo-flash supplies, cathode ray oscilloscopes, television receivers, high potential test equipment, and electronic equipments used by military forces.

Designated as Type 0 for current ranges to 5 milliamperes and as Type 1 for current ranges to 25 milliamperes, the units are available in half wave, full wave bridge, and center tap stacks. Both types are available with voltage ratings to 4000 in a single unit and hundreds of thousands of volts by using multiple units in series. In center tap and bridge circuits the maximum allowable D.C. current is 10 MA for Type 0 and 50 MA for Type 1 assemblies.

The Type 0, in a glass enclosure is hermetically sealed for high humidity operation (Half Wave units only) and mounting is by means of silver plated ferrules. The bakelite enclosed Type 0 rectifiers are designed for normal commercial use and electrical connection is made by means of axial pigtail leads. For inverse voltage ratings to 208 volts A.C. the unit is self supporting; longer assemblies require a mounting clip.

The Type 1 rectifier is available only in square bakelite enclosures. The unit, normally supplied, is not hermetically sealed; however, it is possible to "capsulize" the Type 1 rectifier for high humidity applications.

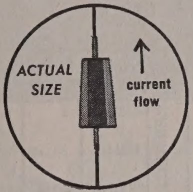
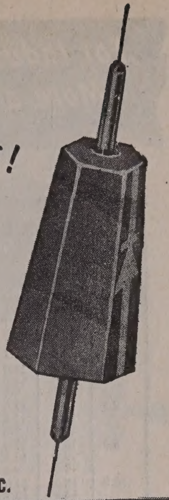
Germanium Diodes

FEATURING POLARITY AT A GLANCE!

Radio Receptor's new Germanium Diodes feature polarity at a glance combined with simplicity of construction and sound design principles. The distinctive tapered shape of the glass-filled phenolic cartridge body speeds assembly because operators can see at a glance the correct direction of assembly.

Users are enthusiastic over the quality of the product which gives a maximum of trouble-free operation even under the most adverse conditions. Radio Receptor Germanium Diodes are currently being used in walkie-talkies, computers, TV sets, tuners and other electronic applications.





All values measured at 25° C.

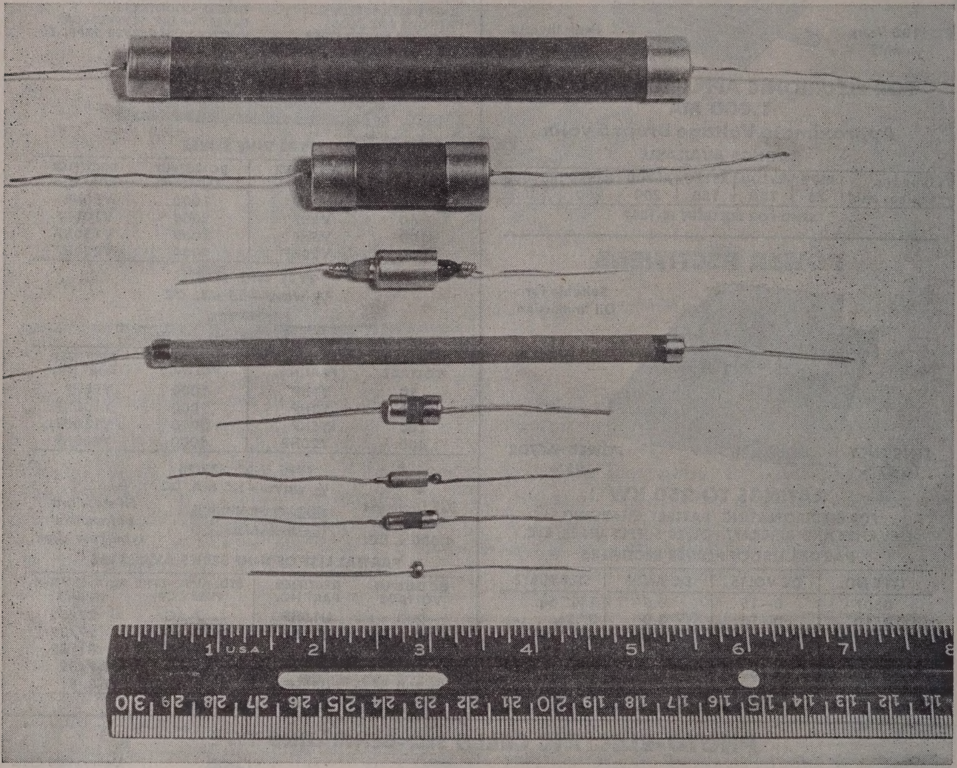
MINIATURE SELENIUM RECTIFIERS



General Electric manufactures a complete line of selenium rectifiers, including miniature cell assemblies used in electronics applications. Because of their low forward resistance and reverse resistance, G-E selenium rectifiers have high efficiency and exceptionally long life.

The standard line of Miniature Selenium Rectifiers consists of ratings of 50 ma and below at 26 to 5200 volts RMS. Stacks are enclosed in Textolite* tubes or metal-clad to meet Government specifications relating to environmental protection. Either lead or bracket mountings can be furnished.

For complete information on G-E metallic rectifiers, consult your nearest General Electric Agent, or write to Section 640-333, General Electric Company, Schenectady 5, New York.

FWG
A Victron terminal strip for high frequency use. The binding posts take banana plugs at the top, and grip wires through hole at the bottom, simultaneously, if desired.

FWH
The insulators of this terminal assembly are moulded R-39 and have serrated bosses that allow the thinnest panel to be gripped firmly, and yet have ample shoulders. Binding posts same as FWG above.

FWJ
This assembly uses the same insulators as the FWH above, but has jacks. When used with the FWF plug (below), there is no exposed metal when the plug is in place.

FWF
This moulded R-39 plug has two banana plugs on ¾" centers and fits FWG, FWH or FWJ above. Leads may be brought out through the top or side.

The MCN dial has been scaled down to lend itself ideally to mobile installations and small converters and tuners. It may also be mounted on the standard 3½" rack panel where such mounting may be desirable. The dial provides three calibrating scales and a 0-100 logging scale. On the rear side of the dial, the mechanism extends 1/4" below the dial frame. 2¾" H. x 3⅞" W.

SCN Dial

The SCN dial provides the same dial scales as the ACN dial but in a reduced size. It is used where economy of panel-mounting space is desirable and where a smaller dial would be out of proportion with the size of the panel. 4-7/16" H x 6¼" W.

ICN Dial

The ICN dial meets those hundreds of requests from amateurs the world over for an illuminated ACN dial. Two dial lights mounted on the top corners of the dial provide efficient and even illumination on all bands. The dial window has been blanked out in semi-circular shape to prevent shadow casting. Dial scales are the same as those used on the ACN dial. 5⅛" H. x 7¼" W.

ACN Dial

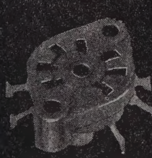
XOA-7 (Axial)



XOR-7 (Radial)

XLA

A low-loss socket for the 6F4 and 950 series acorn tubes for frequencies as high as 600 Mc. Conventional by-pass condensers may be compactly mounted between the contact terminals and the chassis. Low contact resistance, short and direct leads and low and constant inductance are features.

TURRET SOCKET ASSEMBLIES

TSA-1..........7 pin Hollow Stud
TSA-2............7 pin Solid Stud
TSA-3..........9 pin Hollow Stud
TSA-4............9 pin Solid Stud

Designed for our 7-pin and 9-pin miniature tube sockets. Permits compact sub-assembly wiring at base of socket. Cadmium-plated brass center support has a standard length of two inches. Silver-plated brass terminal studs. Available either with holes through which leads can be drawn, or with solid studs. Center supports of varying lengths and other types of terminals can be supplied to manufacturers in quantity.

XOA-7 (mica-filled bakelite)

XOR-7 (mica-filled bakelite)

These high quality sockets for the 7 pin miniature tubes have silver plated beryllium copper contacts that correctly grip the tube pins close to the base of the tube to provide the short leads and low inductance so necessary in ultra-high frequency design.

A novel feature of these new sockets is the interchangeability of the contacts, which are easily removed for replacement. This permits the use of a mixture of axial (XOA) and radial (XOR) type contacts in the same socket to obtain the shortest possible leads, or minimum size in tight places. The above sockets all mount with two 4-40 screws on .875" centers. Chassis cutout should be ¾" dia. Shields for use with these sockets are available.

XOA-9 (mica-filled bakelite)

XOR-9 (mica-filled bakelite)

These sockets are for the new 9-pin miniature tubes. The XOR-9 (not illustrated) has radial contacts. Each has all of the features described above for the 7-pin types and they also mount with 4-40 screws. Mounting center dimension is 1⅛", the chassis cutout should be 13/16" dia.

TC SERIES MINIATURE TUBE CLAMPS

Easy to assemble — just two pieces — a spring clip and a base of stainless steel. Base mounts in same holes, using same screws or rivets, as sockets. Easy to remove tube, simply snap off spring clip. Made to government specifications. Types available for all standard miniature tubes.

Type No.	Tube Body Length	Type Socket
TC-1	1⅛"	7-pin
TC-2	1½"	7-pin
TC-3	2"	7-pin

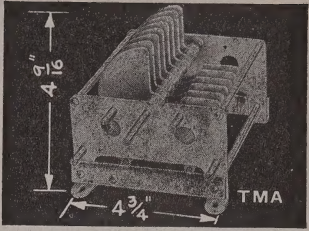
TYPE AMT

A larger and sturdier model of the TMK condenser. The frame is extremely rigid, with mounting feet a part of the end plates. Heavy steatite insulation.

The solid aluminum tie bar across the top of the condenser acts as a mounting for AR-18 series coils in the double stator models.

The double stator models are available in either standard end drive (D series) or center-drive (DG series) with ¼" dia. shaft extension.



TYPE TMA

This is a larger model of the popular TMC. The frame is extremely rigid and arranged for mounting on panel, chassis or standoff insulators. The plates are of heavy aluminum with rounded and buffed edges. Insulation is steatite located outside of the concentrated field.

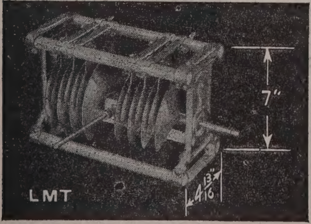
TYPE LMT

A heavy duty transmitting condenser that completely eliminates troublesome closed loops, vastly simplifying the problem of unwanted harmonics. The rotor shaft is completely insulated from the end plates. Long leakage path (higher safety factor). Plates and parts are extra heavy with highly polished rounded edges to prevent flash-over. Adjustable stator plate mounting and end bearings. Available in single-stator, double-stator, or double-stator right angle center drive models. Same capacities and prices as National TML Condenser.



TYPE TML

is a heavy duty job throughout. The frame structure (rugged aluminum castings with dural tie bars) and precision bearings assure permanent rotor alignment. All plates are extra thick with rounded and polished edges. This, plus specially treated steatite insulators and a husky self-cleaning rotor contact, provides high flashover, current and voltage ratings.

MINIATURE CONDENSERS:

Type PS variable condensers are compact silver plated units of soldered construction for use as semi-fixed bandsets or padders. Base is steatite — bearing is "snug" but smooth. PSR models are screw-driver adjust type; PSE have 1/4" diameter shafts both ends; PSL are similar to PSR but include rotor shaft lock.

Type M-30

The M-30 is a tiny (13/16" x 9/16" x 1/2") mica trimmer — 30 mmf. max. — steatite base.

Type W-75, 75 mmf.

Type W-100, 100 mmf.

Small air-dielectric padding condensers having a very low temperature coefficient. They are mounted in 1 1/4" diameter aluminum shields and have 1/4" hex heads for socket-wrench adjustment.

The UM condensers are low-loss, aluminum plate staked construction miniature variables designed for UHF converters, VFOs and the like — minimum capacity is exceptionally low. The UMs can be mounted in PB-10 or RO shield cans and have 1/4" dia. shafts front and rear for ganging (see pages 21, 23 and 24 for shield cans and couplings). Plates: straight-line-cap., 180° rotation. Dimensions: Base 1" x 2 1/4", mtg. holes on 5/8" x 1-23/32" centers, 2-5/16" max. length.

The UMB-25 and UMB-50 are differential (balanced stator) models. UM-10D and UMA-25 are double-spaced and the latter is bolted construction for experimental capacity reduction. Hardware for panel or chassis mounting is supplied with all UM condensers.

"TU BY" CONDENSERS

Tubular condensers providing short r.f. path between plate and cathode for tubes having the plate connection at the top. Design reduces harmonics and helps eliminate parasitics. 3,000 volts or 1,500 volts. 15 mmfd.

PRECISION CONDENSERS

Originally developed for the famous HRO and NC-100 receivers, National PW and NPW condensers and drive units are well known to professional and amateur radio men throughout the world. Sturdily constructed of the finest materials and carefully adjusted by skilled hands, they have become "standard specifications" for applications requiring smooth, precise control and high re-set accuracy.

The Micrometer Dial reads direct to one part in 500. Division lines are approximately 1/4" apart. The drive, at the mid-point of the rotor, is through an enclosed preloaded worm gear with 20 to 1 ratio. Each rotor is individually insulated from the frame, and each has its own individual rotor contact. Stator insulation is steatite. Plate shape is straight-line frequency when the frequency range is 2:1.

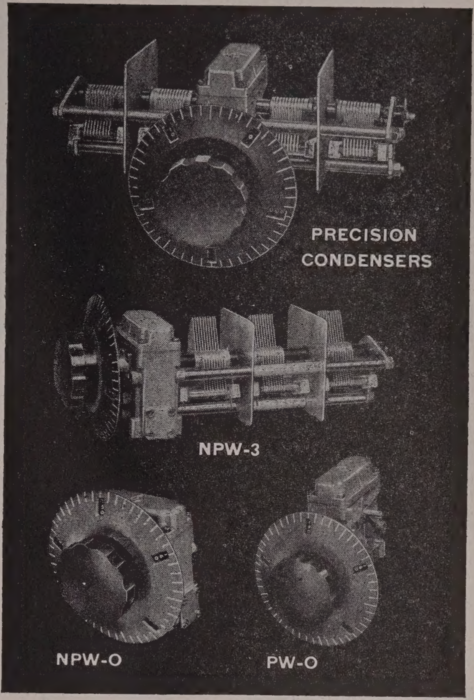
PW Condensers are available in 1, 2, 3 or 4 sections, in either 160 or 225 mmf per section. Larger capacities cannot be supplied.

PW-1R	Single section right
PW-1L	Single section left
PW-2R	Double section right
PW-2L	Double section left
PW-2S	Single section each side
PW-3R	Double section right; single left
PW-3L	Double section left; single right
PW-4	Double section each side

NPW-3 Three sections, each 225 mmf.
Similar to PW models, except that rotor shaft is perpendicular to panel.

NPW-O
Uses parts similar to the NPW condenser. Drive shaft perpendicular to panel. One TX-9 coupling supplied.

PW-O
Uses parts similar to the PW condenser. Drive shaft parallel to panel. Two TX-9 couplings supplied.

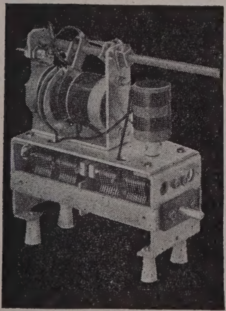


PW-D
The Micrometer Dial used on the condensers and drives above is available separately. It revolves ten times in covering the complete range and as there is no gear reduction unit furnished, the driven shaft will revolve ten times, also. The PW-D dial fits a shaft 5/16" in diameter.

MULTI-BAND TANK ASSEMBLIES

The unique MB-150 Multi-Band Tank tunes all amateur bands from 80 through 10 meters with 180° rotation of the shaft; the coils are never changed. The unit is built around a circuit which tunes to two harmonically unrelated frequencies at the same time. Thus, it becomes possible to cover a wide frequency range and yet maintain a reasonably constant L/C ratio. 3" wide x 8 1/4" high (including the GS-10 standoffs) x 9" long overall including the 1/4" dia. shaft and output terminals.

MB-40SL



Features of the MB-150:

(1) For use as the all-band plate tank in push-pull or single-ended stages running up to 150-watts input (1500 volts peak). It is ideal for a pair of 807s or 809s or a single 829B.

(2) Separate link coupling coil has special clips which adjust to match impedances up to 600 ohms directly. Output couples into a higher powered amplifier, an antenna or an antenna tuning network.

(3) Fast band changing is accomplished without handling coils, thus removing one of the danger points in the amateur station.

Features of the MB-40SL:

The MB-40SL can be used in grid circuits with approximately 20 watts input and in final plate circuits when input to the stage does not exceed 40 watts loaded. Now includes new swinging link for varying inductance. Output can be taken from the variable shielded link when coupling to antenna or next stage.

The well-known trapezoidal monitoring patterns are secured by feeding modulated carrier voltage from a pickup loop directly to vertical plates of the cathode ray tube and audio modulating voltage to horizontal plates. By the addition of such units as sweeps, pulse generators, amplifiers, servo sweeps, etc., all of which can be conveniently and neatly constructed on companion rack panels, the original basic 'scope unit may be expanded to serve any conceivable industrial or laboratory application.

VARIABLE FREQUENCY OSCILLATOR

The No. 90711 is a complete transmitter control unit with 6SK7 temperature-compensated, electron coupled oscillator of exceptional stability and low drift, a 6SK7 broad-band buffer or frequency doubler, a 6A67 tuned amplifier which tracks with the oscillator tuning, and a regulated power supply. Output sufficient to drive an 807 is available on 160, 80 and 40 meters and reduced output is available on 20 meters. Close frequency setting is obtained by means of the vernier control arm at the right of the dial. Since the output is isolated from the oscillator by two stages, zero frequency shift occurs when the output load is varied from open circuit to short circuit. The entire unit is unusually solidly built so that no frequency shift occurs due to vibration. The keying is clean and free from all annoying chirp, quick drift, jump, and similar difficulties often encountered in keying variable frequency oscillators.

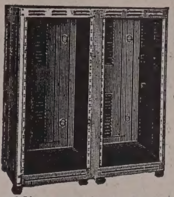
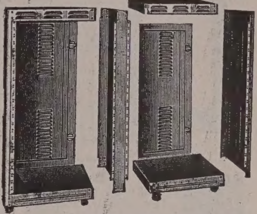
NEW BUD ADD-a-RACK SERIES



It has always been necessary to buy special racks without louvers on one side to obtain a maximum of panel space with a minimum of floor space. Now, you no longer need to buy a whole new cabinet when you want additional panel space. Through our new and exclusive Add-a-Rack series, BUD not only offers additional racks at a lower cost, but provides you with a sturdier, better looking assembly.

The illustration at top shows two Add-a-Rack cabinets assembled together. The illustration below shows the unique and ingenious method of adding a unit to your present equipment. Instead of buying an entire new outfit, you purchase only four parts: (1) a door (2) a top (3) a bottom and (4) an Add-a-Rack coupling-unit. The right (or left) hand side of your present relay rack is removed and replaced by the Add-a-Rack coupling-unit; next, a top and bottom is fastened into place, and the side taken from the first rack is fastened onto the second rack which has been added. Place the additional door into position and you have two racks properly and efficiently coupled together. In the same simple way, more racks can be added at any time and every one will be in a CONTINUOUS ONE-PIECE assembly.



This series is available in two ways. (1) a double unit consisting of two racks and the Add-a-Rack coupling unit, (2) Add-a-Rack unit, consisting of a door, a top, a bottom and an Add-a-Rack coupling-unit. These units are furnished with all necessary assembling and panel mounting hardware.

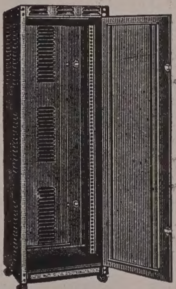
BUD SUPER DE LUXE RACKS (2 door)



This new Relay Rack is made of 16 gauge steel with ⅛" panel supports. The construction is similiar to the series of Bud de luxe Relay Racks shown above. The panel mounting supports are recessed, so that no edges of the panel will be exposed, and they are also adjustable from front to back at various stopping points. This enables you to utilize the space in front and behind the panel to any degree. When placed as far back as the knockouts provide, the panel is 6" from the front of the Rack.

These Racks have both front and rear doors; the rear door to cover any of the equipment behind the panel, providing easy access. The front door provides a means of concealing dials, knobs, etc., that may be in the front of the panel.

These relay racks also have the exclusive Bud feature of supports on the bottom, so that the casters may be fixed directly to the base. AVAILABLE IN BLACK OR GREY WRINKLE OR LIGHT GREY HAMMERTONE FINISH AT NO EXTRA CHARGE.

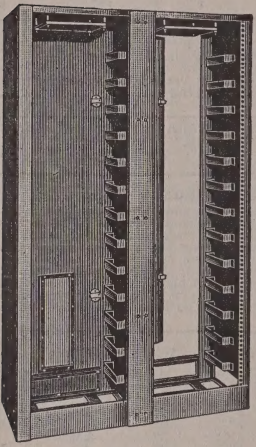
Special Sheet Metal Fabrication Facilities



NOW, BUD RADIO, through its Metal Products Division, offers greatly increased facilities for the production of special sheet metal items. New machinery has been added, departments have been modernized and streamlined and new methods have been developed.

We make over 400 different sheet metal products as stock items. Often a slight change in one of our standard models will eliminate the necessity of special tools and dies, thereby reducing costs. Since we produce thousands of sheet metal products every month for ourselves and for leading firms throughout the country we are able to effect economies in production which mean lower prices and faster delivery.

Our expanded facilities, expert workmanship, years of experience and manufacturing "know-how" assure high quality products. In addition, our engineering staff is always available for consultation and advice. Send us your blue prints for estimates.

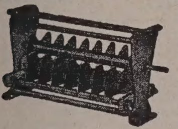
BUD GIANT TRANSMITTER CONDENSER—Single Section



BUD GIANT TRANSMITTER CONDENSERS are built with a sturdy frame consisting of 3/16″ thick aluminum end plates, connected by ⅝″ diameter duraluminum rods. Formed brackets at top and bottom of end plates provide for mounting these units, and permit placing of associated inductances directly on the condenser.

Rotor and stator plates are accurately stamped from 0.064″ thick highly polished aluminum with all edges rounded to minimize corona loss and danger of peak-voltage flash-over. The plates are separated by accurately machined duraluminum spacers that insure a constant air-gap throughout the entire length of the condenser.

The large two-finger rotor-contact spring, made from plated spring brass, assures positive contact with noise-free operation. Steatite bars insulate the stator, and are placed well outside the electrostatic field to keep dielectric losses at a minimum.

BUD MASTER TRANSMITTING CONDENSERS—Dual Section

All tie-rods in this series are insulated by glazed Steatite pillars, thus completely eliminating all closed metallic loops in the condenser frame. A special outstanding feature, developed by BUD engineers, is that of placing the positive double wiping rotor contact between the two sections at the center of the rotor. These features contribute to perfect circuit balance and eliminate the majority of difficulties encountered in high frequency equipment due to parasitics, circulating currents and poor neutralization. Use BUD condensers throughout and be trouble free.

BUD NEUTRALIZING AND HIGH FREQUENCY TUNING CONDENSERS

This line of condensers will fill every neutralizing and high frequency tuning requirement that modern circuits pose. The two-pillar construction makes this unit unusually sturdy and eliminates any possibility of capacity variation due to vibration. The movable plate is adjusted by means of the threaded shaft to which it is attached, and it is permanently locked in any position by the lock-nut provided. Any loose thread is taken up by a special nut and locked to give smooth operation. Plates have rounded edges. Steatite insulation is used.

BUD FEED-THROUGH AND BASE MOUNTED NEUTRALIZING CONDENSERS

In circuits utilizing tubes with the grid lead terminated in the base a feed-through type of neutralizing condenser is particularly suited. One hole is required for mounting of feed-through condensers. Neutralizing condenser illustrated is feed-through type. Plates are made of aluminum rounded at edges to cut down losses. After proper tuning is attained, movable plate can be locked with the knurled nut.

No. 890 and No. 852 are ideal neutralizers for popular low power beam tubes. No. 890 condenser is based mounted only.

BUD TINY MITE PADDERS

For applications requiring a constant padder capacity under all temperature and humidity conditions, these units are ideal. They lend themselves readily to I. F. transformer applications, fixed tuned circuits for exciters, ganged condenser air trimers, and plug-in-coil padding as they fit inside of standard 1½" diameter coil forms. Rotor and stator assemblies are made up of brass plates (0.015" thick) and rods electrically soldered into a solid unit and then are bright cadmium plated. Insulation is Steatite. Here are two heavy duty R. F. Chokes that can really take it in high powered transmitter plate circuits. Each choke is wound on 9/16" dia. Steatite rod, has connection lugs and a mounting foot. **All chokes have a heavy ceramic coating which prevents moisture absorption and enables them to withstand momentary overloads without collapsing the individual pies.**

Consists of five graduated pies wound in continuous winding. Care has been taken to prevent any of the pies from being resonant on an amateur band and to keep the distributed capacity at a minimum. Overall height 3¼".

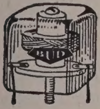
IRON CORE R. F. CHOKES



The efficiency of any circuit requiring an R. F. choke will be definitely improved by utilizing one of these chokes with a finely divided molded metallic core. The improved "Q" possible with this construction results from the D. C. resistance of these chokes being from 40 to 50% less for a given inductance than for regular air-core types. Thus, the D. C. voltage drop through the choke is considerably less, yet the choking action is equally as good. Windings are made with silk-covered enameled wire terminated on convenient soldering lugs, and the chokes are mounted in small square shield cans measuring 1⅜" x 1⅜" x 1-7/16".

Bud heat radiating connectors fit all sizes of industrial and transmitting vacuum tubes. These connectors serve a dual purpose, not only are they useful to make connections to plate or grid terminals, but they provide a large heat radiating surface that will dissipate heat from the glass seal and tube element. Eight sizes fit all grid and plate leads and also provide sufficient heat radiation for any tube operating in the range of 50 to 2000 watts. All radiators are machined from special aluminum rod. Edges are rounded to minimize corona loss.

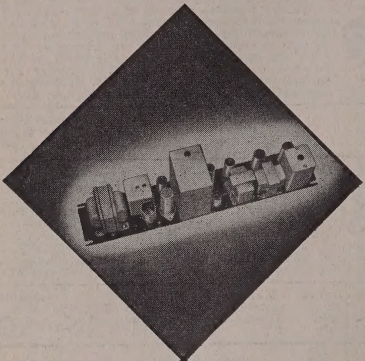
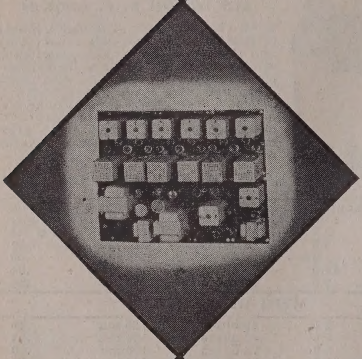
HAMMARLUND

DATA TRANSMISSION • SELECTIVE CALLING AND SUPERVISORY CONTROL EQUIPMENT



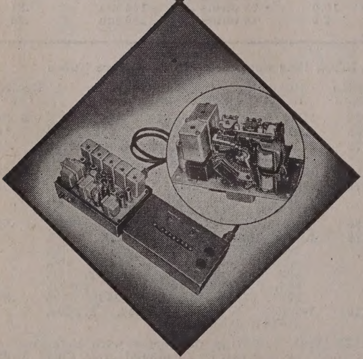
POINT TO POINT SIGNALING

The Hammarlund Standard Duplex Signaling Unit consists of a tone generator and receiver designed to operate over wire lines, telephone or power line carrier, and radio or microwave communications circuits for signaling, dialing, slow speed telemetering, supervisory controls or other information. Transmitters and receivers are available for 36 frequency channels between 2000 and 6475 cps. This equipment is being used by military and governmental agencies, pipeline and power companies, railroads and other groups requiring remote on-off switching, continuous indication of operating conditions, and automatic detection of wire line or power source failures along their systems.



PROTECTION THROUGH SUPERVISORY CONTROL

The Hammarlund "Multi-Gate" Remote Supervisory and Control System is engineered to provide highly efficient, fully reliable operational controls of important remote equipment such as used by refineries, pipelines, utilities, railroads, civil defense and other commercial, as well as military, groups. Because of a unique design by which a single tone activates a receiver, which in turn will then accept a second tone to operate a relay, this equipment can be used where disturbances on connecting wire or radio circuits make ordinary tone-operated remote controls impractical. Up to 21 individual on-off functions can be handled over a single circuit employing only 7 audio signaling tones.



SELECTIVE CALLING OR SIGNALING

Hammarlund Selective Calling equipment, added to 2-way radio systems used to control large fleets of vehicles, or distant fixed stations, adds privacy, speed, safety, quietness and convenience to day-in-day-out operations. By the push of a button the dispatcher within 0.8 of a second selects the station which he wants to contact. Only the selected operator or group of operators can receive the call. If the operator of the car or station being called doesn't answer, an indicator lamp remains lighted to show he was called. This simple equipment can be added to any present installation, or incorporated in any type of installation now projected.

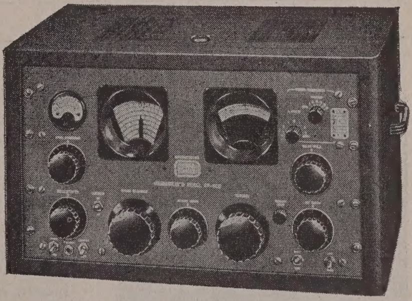
This magnificent receiver is a 20 tube dual conversion superheterodyne. The power supply is an integral part of the receiver chassis. Operation on any of six crystal controlled fixed frequency channels within the range of the receiver is immediately available. This designates it as the perfect receiver for point-to-point and network operations. Pre-arranged day and night fixed frequencies. With crystal control you can select your desired channels immediately.



Stability is .001 to .01 percent depending on frequency to which receiver is tuned, image rejection is 80 db to 120 db down, and spurious responses are at least 100 db down. "BFC" CAPACITORS

FEATURES—The "BFC" "butterfly" type capacitor has very low minimum capacity, low inductance and isolated rotor for use in VHF applications as a series capacitor with no rotor contact. Mechanical and electrical symmetry and stator terminal locations minimize circuit inductance.

CONSTRUCTION—Brass rotors and stators are soldered and nickel-plated. The contact wiper is heavily silver-plated beryllium-copper. Tapped studs on the silicone treated steatite front panel permit mounting the capacitor without grounding the rotor. The sleeve type bearing is nickel-plated brass.

SPECIFICATIONS—Straight line capacity. 90° rotation from minimum to maximum capacity position. Air gap is 0.030" nominal. Tested at 1200 V. R.M.S., 60 cycles between rotor and each stator.

High Speed Ball-Bearing Models Also Are Available

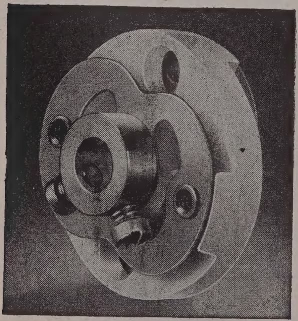
"FC" and "FNC" COUPLINGS



FEATURES—The "FC-46-S" is an insulated flexible coupling designed to provide for mechanical ganging of shafts even though angularly misaligned. The smallest dimensions have been incorporated consistent with the rugged construction necessary for general service. A high degree of electrical isolation is achieved through the use of silicone treated steatite insulation. Flash-over voltage is approximately 5000 V. R.M.S. Brass hubs and spring temper phosphor bronze flexible arms are nickel plated. An exclusive and important feature of this coupling is its characteristic of uniform side-thrust through 360° of rotation. This eliminates tendency to vibrate at high speeds, minimizes bearing wear and assures accurate tracking.

The "FNC-46-S" is a non-insulated coupling for use where electrical continuity between shafts is required. The flexible arms are held securely to a nickel plated brass ring instead of an insulator.

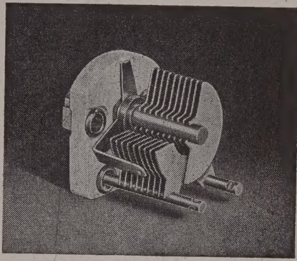
"MAPC" CAPACITORS



FEATURES—The "MAPC" capacitor is representative of Hammarlund's efforts to meet the demand for smaller dependable components. It is a scaled-down version of the popular "APC" with everything reduced except the quality and performance characteristics. For example, an "MAPC" is about half the size and weight of an "APC." Lower minimum capacities and low inductance make the "MAPC" suitable for VHF use.

CONSTRUCTION—The standard "APC" construction is used in this capacitor. Rotors and stators are fabricated by soldering brass plates to supporting members and nickel-plating the assemblies. Nickel-plated phosphor bronze wiper assures positive rotor contact. Tapped brass mounting studs fastened to silicone treated steatite base permit mounting capacitor without grounding rotor.

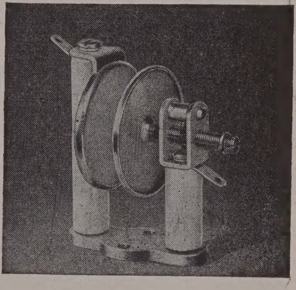
SPECIFICATIONS—Straight line capacity. Screwdriver or socket wrench adjustment. Air gap is 0.0135" nominal. Tested at 600 V. R.M.S., 60 cycles.

"NZ-10" CAPACITORS



FEATURES—The "NZ-10" is a compact transmitter neutralizing capacitor designed for easy and accurate adjustment. The rotor is attached to a fine-thread lead screw which may be adjusted with smooth and precise action by a screwdriver and locked securely by a readily accessible clamping screw. A stop prevents shorting of plates at maximum capacity. Long leakage paths to ground from both rotor and stator are provided. Glazed steatite insulators and smoothly rounded aluminum plates minimize flashover.

SPECIFICATIONS—Capacity is adjustable from 2.3 to 10 mmf. Peak voltage rating is 3000 V. at maximum capacity (minimum gap) position.

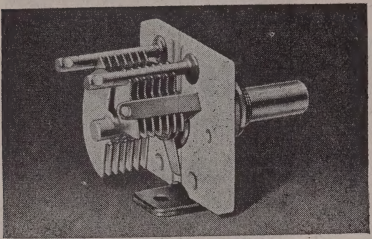
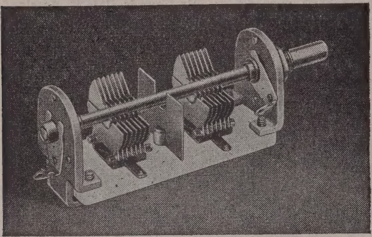
"HF" and "HFD" CAPACITORS



SPECIFICATIONS—Straight line capacity. Single spaced types (HF and HFD) have 0.015" air gap and are tested at 600 V. R.M.S., 60 cycles. Wide spaced types (HF-X and HFD-X) have 0.045" air gap and are tested at 1400 V. R.M.S., 60 cycles.



SINGLE SECTION CAPACITOR—The "HF" is a single section tuning capacitor employing "APC" rotor and stator design. Extra long sleeve bearing and positive contact nickel-plated phosphor-bronze wiper make this unit ideally suited to high frequency applications. Silicone treated steatite insulation. Single hole or base mounting.

DOUBLE SECTION CAPACITOR—The "HFD" dual capacitor, like the "HF" singles, incorporate advanced features providing for maximum efficiency at high frequency. Aluminum front and rear end panels are mounted on a heavy silicone treated steatite base. Wide front and rear bearings with individual silver-plated beryllium-copper wipers for each section assure long life and maximum contact efficiency. Single hole panel mount or base mounting.

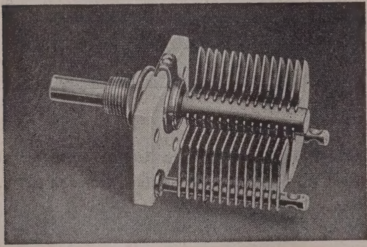
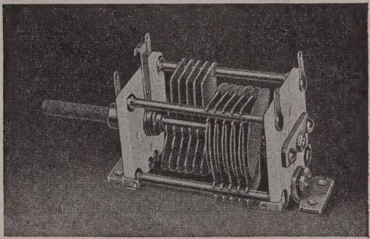
"HFA" and "HFBD" CAPACITORS



SPECIFICATIONS—Straight line capacity. Air gaps and test voltages are as indicated in table. However, "HFBD" breakdown voltages are doubled and capacitance values approximately halved when stator sections are connected in series.



SINGLE SECTION CAPACITOR—The "HFA" is a single section tuning capacitor similar to "HF" except that larger plates permit wider air-gaps for the same capacitance values. Resultant higher break-down ratings extend the use of the capacitor into the high frequency low-power transmitter field. A threaded sleeve bearing permits single hole mounting and the bracket supplied may be used for base mounting. A lug type terminal soldered to the bearing provides an efficient rotor connection.

DOUBLE SECTION CAPACITOR—The "HFBD" is a dual, balanced rotor transmitting capacitor employing front and rear panels plus a ball-thrust rear bearing, but otherwise incorporating constructional features identical to the smaller "HFA." An insulated shaft extension safeguards operating personnel from the high voltages which may be applied to the rotor. The small size, rugged construction, balanced rotor and range of capacitance values and breakdown voltages make this capacitor ideally suited to many applications.

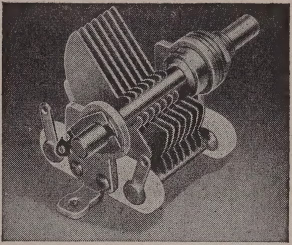
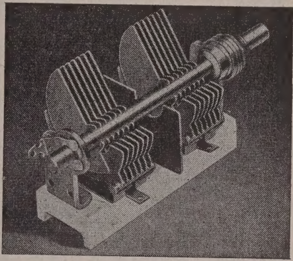
"MC" and "MCD" CAPACITORS





FEATURES—The "MC" is a versatile single section tuning capacitor designed to give a choice of mountings, connections and capacity characteristics. "MC-S" capacitors have a straight line capacity characteristic. "MC-M" units have offset plates resulting in a "Midline" characteristic which more equally spaces frequencies. "MC-X" units are wide-spaced for high voltages. The "MCD" is a split-stator panel-mounted capacitor.

SPECIFICATIONS—Straight line or "Midline" capacity characteristic. Single-spaced types have 0.0245" nominal air gap and are tested at 1000 V. R.M.S., 60 cycles. Wide-spaced ("X") types have 0.0715" nominal air gap and are tested at 1750 V. R.M.S., 60 cycles.

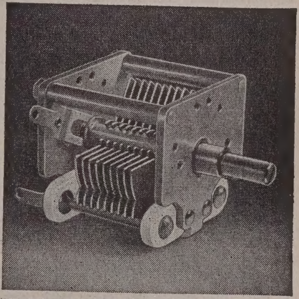
"RMC" CAPACITORS



FEATURES—The "RMC" was designed specifically for applications requiring an "MC" type tuning capacitor with very rigid construction. Its sturdy frame consists of heavy gauge aluminum end panels held together by three aluminum tie rods. It has a brass sleeve front bearing and a single ball thrust rear bearing for smooth tuning and a high degree of resetability. The rotor contact is a forked silver-plated beryllium-copper spring wiping against a wide disc on the rotor.

SPECIFICATIONS—Straight line capacity. Air gap is 0.0245" nominal.

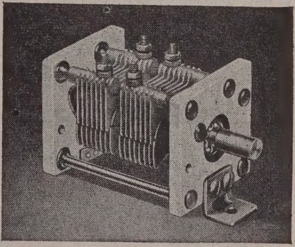
"VU" CAPACITORS



FEATURES—The "VU" is a uniquely designed UHF tuning capacitor using completely original concepts. With it, conventional "lumped constant" circuits, rather than tuned cavity techniques, can be efficiently used up to 500 megacycles. In addition to employing the capacitor sections in series to eliminate the rotor wiper, the design also utilizes Pyrex balls to form precision bearings and to completely isolate the rotor. Thus, noise generated by rubbing metal-to-metal contacts and variable resistance paths in the bearings have been totally eliminated. Circuit connections are made to threaded studs on each stator. This permits vacuum tube and inductor to be mounted adjacent to and on opposite sides of the capacitor to minimize circuit inductance.

SPECIFICATIONS—The capacity characteristic approaches a straight line frequency curve as indicated by nominal values in table at left. Air gap is .0168" nominal. Tested at 700 V. R.M.S., 60 cycles, between rotor and each stator.

R.F. Transformer for HV Power Supply

These R.F. power supply transformers for use with television receivers and cathode ray oscilloscope make possible construction of an inexpensive source of high voltage. Two types are available, the 4525 for voltages to 5000 DC and the 4526 for voltages to 10,000 DC (or 30,000 DC in a voltage rectifier tripler circuit). Type 1B3-GT tubes are used as rectifiers and the R.F. oscillator circuit uses one or more type 6V6 or 6Y6 tubes connected in parallel. The high frequency AC source permits use of simple and inexpensive resistive capacitive filters with low ripple content in the output. Typical circuit diagrams are supplied with each coil.

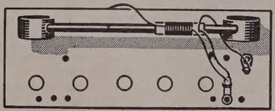
Ferrite Rod Loop Antenna



The electrical characteristics of this newly developed type Ferrite Rod Loop Antenna make possible a general replacement loop that offers outstanding performance. Reception of distant stations will be improved to the extent that no antenna or ground will be required, and on local stations much better reception will be insured. The Loop Rod Antenna has an adjustable inductance which makes it possible to peak the antenna stage by merely sliding the coil along the ferrite rod; this also enables it to be used with a variety of tuning condensers.

"BABY" TURRETS

35-WATT RATING

These compact 5-band switching units cover amateur bands from 10 to 80 meters with any 50 mmf. midget condenser. Also available with 160 meter coil substituted for the 15 meter coil. (100 mmf. required on 160 meters.) Sturdy construction and unique design assure permanent coil alignment and maximum efficiency with a minimum number of tubes. Four types—BTM, straight untapped; BTCT, center tapped; BTEL, end linked; and BTCL, center linked—provide vastly improved band-switching in low-power transmitters and exciters.

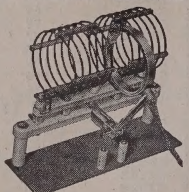
B & W FARADAY SHIELDED LINKS

. . . fit all B & W variable link air inductors



These shielded links effectively reduce harmonic or spurious signal radiations normally transferred by capacity coupling.

Adaptable to all conventional link coupled circuits, the B & W Faraday Shielded Links materially aid in the reduction of TV and BC interference. They may be used with external antenna tuning units or, in conjunction with harmonic reduction filters of the low-pass or band-pass types.

It is impossible to specify the exact number of link turns required because loading is affected greatly by the antenna input impedance and this is not generally known with any degree of accuracy. On 10 and 20 meters, a one turn link is normally satisfactory for 50 ohm lines, two turns for 75 ohm lines and three turns for lines having higher impedances. For average conditions our two turn link should suffice.

B & W TVI LOW-PASS FILTERS

- **Provide extreme attenuation to all harmonics above 30 mc**
- **Eliminate individual filters for each band**
- **Handle 1 kilowatt with ease**
- **Insertion loss less than .25 db**

Three years of intensive study of TVI problems made possible the B & W Faraday Shielded Link. Its natural companion, the **B & W Low Pass Filter**, was developed concurrently and is now available. Properly installed in accordance with our recommendations, this filter enables you to attenuate all frequencies above 50 megacycles, approximately 75 db or more, throughout the entire television band.

The B & W Low Pass Filter consists of two "m" derived end sections and three mid-sections of constant K type. Each section is contained in a completely sealed copper compartment to prevent inductive transfer of unwanted frequencies from section to section. Complete installation instructions and recommendations to aid you in eliminating TVI are given in "Filter-Facts," packed in each unit. Individual copies of "Filter-Facts" are also available for 15 cents. Filters are supplied in hammered gray metal cabinets 2½″ x 2½″ x 12″ and weigh 2¼ lbs.

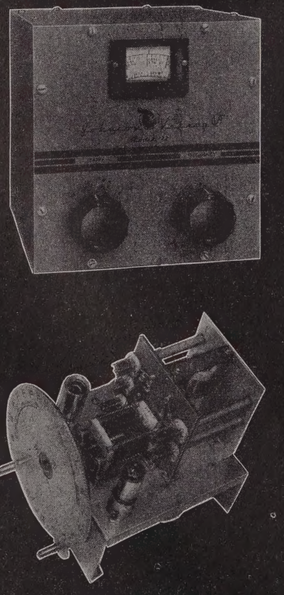
VIKING II TRANSMITTER KIT



VIKING VFO KIT

JOHNSON VIKING II TRANSMITTER KIT

Effectively TVI Suppressed!

180 Watts CW Input	130 Watts CW Output
135 Watts Phone Input	100 Watts Phone Output
100% AM Modulation	Completely Shielded

The JOHNSON Viking II is a self-contained, bandswitching, TVI suppressed amateur transmitter supplied in kit form and complete to the last detail. Full output is available on the 160, 80, 40, 20, 15, 10-11 meter amateur bands. Complete range of output frequencies is as follows:

BAND	LOW FREQ. LIMIT	HIGH FREQ. LIMIT
160	1.8 mc.	2.4 mc.
80	2.9	4.4
40	5.2	8.0
20	9.8	15.0
15	15.0	21.8
10-11	21.0	30.0

The RF section consists of a 6AU6 oscillator, a 6AQ5 buffer/multiplier and parallel 6146 output amplifier. Modulator; pp 807's operating class AB_2 with 6AU6 speech amplifier and 6AU6 triode connected driver. Parallel 5R4GY HV rectifiers, 5V4G low voltage rectifier and 6AQ5 clamper screen voltage regulator. Fixed bias applied to buffer and output amplifier permits break-in CW operation. Audio response is limited to the center of the speech range. The pi-network amplifier matches a wide range of impedances and provides up to 30 db second harmonic attentuation **before** the addition of a low-pass filter.

One of the outstanding features of the Viking II is its completely new cabinet. Heavily copper plated, it is the equivalent of a solid copper box. There are no butt joints which would permit RF leakage and cause TVI. The dial window and meter are equipped with copper plated shields to prevent radiation from these panel openings. The lid is bonded to the cabinet with silver plated phosphor bronze bonding fingers. It can be opened easily however by the removal of just three thumbscrews. Both lid and bottom plate are perforated permitting free circulation of cooling air.

Power leads, VFO power receptacle, key jack, microphone connector and meter leads are filtered to prevent radiation from these points. Filters consist of chokes and low inductance capacitors, not simply bypass capacitors. Other filters are used in the transmitter to suppress spurious output at its source. Antenna relay terminals are provided and they too are filtered. Shielded coaxial connectors are used for VFO input and RF output terminals.

When used to feed an antenna system directly, the pi-network output coupling circuit is capable of matching unbalanced loads within the range of 50 to 600 ohms. The pi-network can tune out several hundred ohms reactance as well. In order not to compromise this flexibility unnecessarily, low pass filters which require fixed impedance loads have been omitted from the Viking. There are many urban areas where the shielding and inherent harmonic attenuation of the amplifier are sufficient to eliminate television interference completely. Where required, however, the JOHNSON 250-20 JOHNSON Low Pass Filter (available as a separate accessory) will provide 75 db of additional harmonic attenuation (above 54 mcs.) making the Viking II virtually TVI proof.

All parts furnished including a complete set of tubes, cabinet, punched chassis, wiring harness, wire, terminals, grommets and all other hardware. Carefully detailed and illustrated instructions for assembly, test and operation are also included. The Viking II is available wired and tested by factory authorized wiremen at nominal additional cost.

Supplied for 115 volt 50/60 cycle operation only. Cabinet dimensions 20" wide, 10$\frac{5}{16}$" high, 13" deep. Net weight assembled, 65 pounds.

VIKING VFO KIT

An extremely stable variable frequency oscillator designed for use with frequency multiplying transmitters. Using two entirely separate oscillator tank circuits, the VFO delivers 8 to 10 volts RF throughout the range 7.0 to 7.425 mcs., 5.5 to 7.5 volts throughout the range 1.75 to 2.0 mcs. Although designed as a companion unit for the Viking transmitter it will excite any transmitter having a conventional pentode crystal oscillator circuit. The transmitter oscillator stage serves as an isolating RF amplifier or frequency doubler when driven by the VFO.

The tuning capacitor is a special ceramic insulated JOHNSON with full soldered construction. Ceramic insulated air dielectric trimmers, temperature compensated ceramic padders, ceramic coil form and rigid construction are features contributing to the high overall stability. The tube complement consists of a 6AU6 electron coupled oscillator and an OA2 regulator. Excellent isolation between oscillator and the output circuit together with screen grid voltage regulation account for the clean, chirp-free keying.

The Viking VFO is accurately calibrated for all amateur bands from 160 to 10 including 15 and 11 meters. A 5" dial with 180° bandspread and 6-1 vernier dial provide smooth tuning and high reset accuracy. Power requirements, 6.3 volts AC or DC, .3 amperes; 250-300 volts DC, 15 ma. unregulated. (Power and RF input connections provided on every Viking transmitter.)

Kit furnished complete with all parts, assembly and calibration instructions but less tubes. When used with a Viking II or other shielded transmitter having filtered power leads, no TVI suppression measures are required.

Size 7"x6$\frac{7}{8}$"x6$\frac{9}{16}$", net weight assembled, 4 pounds.

JOHNSON "MATCHBOX"

Transmitting Antenna Coupling System

More than an antenna coupler, the JOHNSON "Matchbox" performs all transmission line matching and switching functions required in medium power amateur stations. The unit is bandswitching and completely self-contained.

Almost an infinite variety of antennas can be loaded throughout the amateur bands from 3.5 to 30.0 mcs. Balanced antennas from 25 to 1200 ohms resistance can be matched while unbalanced or single wire antennas within the range of 25 to 3000 ohms resistance can be successfully loaded. Furthermore, the "Matchbox" is capable of tuning out large amounts of reactance. Nominal input impedance is 52 ohms, power rating 250 watts. A special JOHNSON dual variable capacitor with four stator sections serves as a capacity divider providing continuously variable matching to the load.

A change-over relay built into the "Matchbox" switches the antenna from receiver to transmitter and grounds the receiver antenna terminals in the "transmit" position. This same relay will also serve to mute the receiver while transmitting. The "Matchbox" improves receiver performance by matching antenna impedance to the input impedance of the receiver. Adjustment for matching receiver input impedance is independent of transmitter loading adjustments. For CW operation a keying monitor may be actuated by the RF probe provided.

The "Matchbox" is supplied in a fully shielded maroon and gray cabinet matching the Viking II transmitter, cabinet dimensions 9⅞" wide, 10½" deep, 7" high. Supplied only as a completely assembled and tested unit, the "Matchbox" weighs approximately 6 pounds. Ceramic insulated output terminals, SO-239 coaxial RF input connector and seven terminal receiver and relay terminal strip are all located on the rear of the cabinet.

LOW PASS FILTER

The JOHNSON Low Pass Filter consists of four individually shielded sections, capable of handling more than 1000 watts RF, amplitude modulated. Cut-off frequency is 45 mcs. with "M" derived end sections adjusted to provide maximum attenuation at 57 mcs., the center of TV Channel 2. Attenuation of harmonic and spurious frequencies above 54 mcs. is 75 DB or more. Insertion loss less than .25 DB at 30 mcs. Characteristic impedance of the filter is 52 ohms. Construction permits the replacement of Teflon dielectric of the fixed capacitors should there be damage due to accidental overloads. Standard SO-239 coaxial connectors are used for input and output terminals. Completely assembled, pretuned and equipped with convenient mounting hardware.

When inserted in a 52 ohm flat line between transmitter and an antenna coupler such as the "Matchbox" (above), flexibility is not impaired and the filter is operating under the matched impedance conditions required for maximum harmonic attenuation. Dimensions: 2½" dia. x 9⅝" length overall, weight approximately 1½ lbs.

250-20	**$16.50**

STANDING WAVE RATIO BRIDGE

Provides accurate measurements of standing wave ratio enabling an operator to adjust his transmission line and antenna coupling system for minimum SWR. A necessity for most effective use of a low pass filter. Other uses include measurement of antenna reactance and antenna feed point impedance.

Impedance is 52 ohms, can be changed to 70 ohms or other desired value by simply changing the standard resistor. Designed for use with a 0-1 ma meter but supplied with data for 100 and 250 microampere meters thus any standard multimeter may be used as an indicator.

Shielded construction, 2⅜" dia. x 4½" overall length. Equipped with SO-239 coaxial connectors and polarized meter jacks, weight ½ pound.

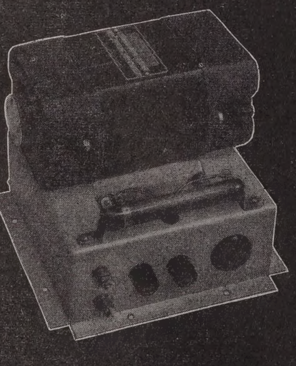
VIKING MOBILE TRANSMITTER



DYNAMOTOR POWER SUPPLY

VIKING MOBILE TRANSMITTER KIT

Designed for most effective amateur mobile use, the Viking Mobile **Transmitter Kit** features:

Instant bandswitching, 75, 40, 20, 15, **11-10 meter bands**
Gang tuning
Efficient antenna coupling circuits
Front panel control—dash mounting
Up to 60 watts PA input
All stages metered—illuminated meter

Not only does the Viking Mobile cover six bands but all coils are self-contained and switched from the front panel. Maximum input of 60 watts 100% amplitude modulated. Sufficient audio gain for either high impedance or carbon microphones.

Three gang tuned RF stages, 6BH6 oscillator, 6AQ5 buffer/multiplier and an 807 amplifier. Panel mounted crystal holder accommodates four crystals and VFO/crystal selector switch. The transmitter may be driven to full output with the Viking VFO and VFO RF input and power receptacles are provided for this purpose.

The 807 amplifier stage employs three separate inductors, permanently mounted in the transmitter and selected by the bandswitch, to cover the tuning range. Each inductor has a series tuned antenna coupling link. These ganged links, adjusted by means of a front panel control, eliminate "cut and try" antenna loading methods. The final amplifier is equipped with a trimmer which serves to tune out antenna reactance when a change in operating frequency is desired without the necessity of adjusting the antenna mounted loading coil.

The audio system is comprised of a 6AU6 speech amplifier, a 6AU6 driver and pp 807 modulators operating class AB$_1$. Audio gain control and three circuit' microphone connector for "push to talk" operation are located on the front panel. Input circuit may be wired for either carbon or high impedance microphones.

A unique and exclusive feature of the Viking Mobile is its RF type fixed bias supply. Utilizing one triode of a 12AU7 as an oscillator operating around 4.5 mcs. and the other triode as a half wave rectifier, the supply provides fixed bias for the 807 modulators, 807 final amplifier and 6AQ5 buffer/multiplier. By this means cathode bias is eliminated, RF tubes are protected in the event of an excitation failure. Modulator "no signal" current is kept low thus greatly improving efficiency by reducing the total battery power required for each transmitting cycle. The bias supply is well shielded and decoupled from other circuits, radiation is negligible.

An illuminated meter, switched from the front panel, measures oscillator, buffer, PA and modulator cathode current also PA grid current. Locations of the meter and crystal selector switch are reversible providing maximum visibility with the transmitter mounted either to the right or left of the driver. Knobs are marked so that their positions are visible at wide angles.

Ready accessibility to the chassis has been a paramount design consideration. Front panel, rear cover, bottom plate and chassis are all one assembly. The cabinet is a sturdy steel cover consisting of top and sides, open at the ends and with lips at the bottom supporting the chassis. It is thus possible to slide the chassis out of the cabinet without even the necessity of disconnecting cables. Since the cabinet is open at the bottom, the empty cabinet can be very simply and easily mounted.

PA excitation control, filament switch, audio gain control and a three position function switch ("Tune-Transmit-Receive") are located on the front panel. Optional auxiliary functions of the "Tune-Receive-Transmit" switch include "Non-Swish" VFO tuning, receiver muting and use of receiver power supply for exciter and speech amplifier plate voltage. Where convenient the exciter and speech amplifier may be operated from a separate supply delivering 260 to 300 volts at 70 ma. The class C amplifier may then be operated from another supply avoiding the necessity for voltage dropping circuits and securing maximum use of existing equipment.

The Viking Mobile may be wired for either 6 or 12 volt operation. With the power supplies listed below, power output is approximately 32 watts. Using a 600 volt DC supply maximum output is 42 watts. Eighteen watts output can be achieved with a 300 volt supply.

The Viking Mobile is another outstanding JOHNSON transmitter furnished in kit form. Included are all necessary component parts, punched and formed chassis and cabinet, wiring harness and hardware. Assembly instructions are carefully written and the order of assembly worked out so that no difficulty will be encountered. Instructions include photos at various stages of assembly, supplemental drawings, alignment data, receiver interconnection, antenna suggestions etc. The experienced amateur will find the Viking Mobile easy to assemble and convenient to use.

JOHNSON ROTOMATIC ROTATOR

An improved all-weather rotator designed for the most rigorous service. The housing is an aluminum casting, light weight yet sturdy enough to withstand the stresses imposed by high wind loads and icing. Rotator is conservatively rated to support 20 meter arrays together with higher frequency antennas weighing a total of 175 pounds. Rotating table is 5⁄16" steel, is drilled and tapped to accommodate JOHNSON Boom Assemblies.

The main shaft is driven by an oversized, continuously lubricated worm gear assembly. Drive unit consists of a 1/20 HP, instantly reversible, capacitor type gear motor. Total reduction is 1200 to 1 resulting in 1¼ RPM rotator speed. Both the motor and its integral gear assembly are equipped with ball bearings and special lubricant; full torque is delivered even at extremely low temperature. Motor creates no radio nor TV interference.

RF slip rings, insulated with glass bonded mica, permit continuous rotation thru 360 degrees in either clockwise or counter-clockwise directions. Heavily chrome plated slip rings provide low resistance contact, noise-free operation and resist corrosion. Rotator is equipped with auxiliary slip rings and convenient terminals for beam switching relay.

A hinged base permits the entire rotator and antenna assembly to be tilted a full 90° for antenna adjustment. The rotator may be turned while in the tilted position.
The complete 138-112 assembly includes a control box with selsyn direction indicator. Accurate azimuth bearings are continuously presented on an illuminated dial. Controls include Clockwise-Off-Counterclockwise rotation control switch, power switch and antenna relay switch.

Rotator nominal dimensions, 15½" x 15⅝" x 15", weight 76 pounds, mounting area required 11" x 14". Control box dimensions 6" x 6" x 6", weight 2¾ pounds. Eight conductor interconnecting cable for rotator and control box furnished as a separate accessory item.

JOHNSON ANTENNA ARRAYS

Parasitic beam antennas for the 10, 15 or 20 meter amateur bands. Dual 10 and 20 meter arrays may be mounted on the same boom and selected by means of the 138-108 relay. Elements are strong, lightweight aluminum alloy tubing, grounded at the center to the boom assembly. Both element lengths and spacing are continuously variable, elements may be located at any point along the boom. Balanced open wire transmission lines may be matched to the driven element by means of the adjustable "T" matching section. Coaxial transmission lines matched by "Gamma" or half "T" section.

Boom assemblies are 2" galvanized steel tubing. U-bolts, together with element support clamps are used to fasten each element to the boom. Elements are firmly clamped to the boom and cannot work loose yet their positions are readily adjusted. The assembled beam requires no cross-bracing and has low wind resistance.

Ten meter elements consist of a ⅞" diameter tube 12 feet long with ⅝" adjustable end sections. Maximum element length 19 feet, minimum length 12 feet. Fifteen meter elements are similarly constructed with maximum length of 25 feet. Tubing diameters of 20 meter elements are 1⅛", ⅞" and ⅝"; elements extend to a maximum length of 36 feet. Bushings are used to insure close fit, minimum resistance and maximum rigidity of telescoping elements.

Because of the large number of antenna combinations available, boom assemblies and element kits are listed separately. Boom assemblies are not included in the prices of antenna element kits. For example, a dual three element 10 and 20 meter interlaced beam consists of one 138-210-3 element kit, one 138-220-3 element kit and a 138-153 boom assembly. In addition, a 138-108 beam switching relay is required.

Boom assemblies have fixed length and are available as follows:

JOHNSON "BI-NET"

Fully Automatic
Mobile Dual Band Antenna Resonator
(Patents Pending)

Dual mobile antenna loading network for 10 and 20 meter amateur bands. Mounted in the center of a standard mobile whip antenna, it enables the operator to change bands while in motion. Operation is completely automatic, no relays nor mechanical control are required. After initial adjustment, the "BI-NET" requires no further attention. Now, for the first time, true bandswitching mobile operation is attainable.

The "BI-NET" is a tuning network consisting of two adjustable low-loss inductors and a ceramic insulated fixed capacitor. Inductors are silver plated for maximum conductivity. The assembly is enclosed in a streamlined, weatherproof-plastic housing and is equipped with ⅜" x 24 female threads at each end for antenna mounting. Overall size, 4⅞" high, 5⅜" long, 2⅜" maximum width, weight 14 oz.

TYPES "C" AND "D" CAPACITORS

JOHNSON C and D Capacitors are rugged, reliable and simple. Their functional design permits rapid, accurate assembly which results in lower cost to the user. Materials are appropriate for the application and the finest available today. If you're building medium powered radio frequency equipment it will pay you to use JOHNSON C and D Capacitors.

CONSTRUCTION

Heavy aluminum end frames, .051" plates and 5/16" tie rods assure extreme rigidity. Rotor contacts are laminated phosphor bronze. Dual models have center rotor contact for electrical symmetry. Low-loss Steatite insulators are located outside the most intense RF fields and used solely to support stator assemblies. Shafts are 1/4" diameter, cadmium plated with 3/4" rear extensions.

Mounting brackets furnished for normal or inverted mounting. End frames drilled and tapped for panel mounting, special brackets or mounting of accessory components.

SPECIAL TYPES

Variations from standards such as special capacitances, ball bearings, dynamically balanced rotors, stainless steel shafts and right angle drive duals can be furnished in production quantities.

Stated maximum and minimum values of capacitors are nominal, subject to plus or minus tolerances. Guaranteed values, or "lowest maximum, highest minimum" should be requested from the factory if necessary.

TYPES "E" AND "F" CAPACITORS

Designed as rugged, compact units for medium and low power transmitters, type E and F capacitors are in a class by themselves. They have more capacity per cubic inch and occupy less panel space for their rating than any other capacitor on the market.

Points of superiority: Heavy aluminum plates, .032" thick, with rounded edges for maximum voltage rating — Heavy aluminum tie rods 1/4" diameter for frame strength and rigidity — Steatite insulation — mount with stator up to reduce capacity to ground — heavy phosphor bronze contact springs, cadmium plated — Center contact on dual models — Chassis or panel mounting — Stainless steel shafts.

In addition to mounting foot shown, removable single hole brackets are furnished so that capacitor may be inverted from position shown, or other components mounted above.

EXPLANATION OF TYPE NUMBERS

The first part of the type number indicates the capacity per section in mmfd. The following letter indicates the frame size. A second letter D indicates a two section type. The final number multiplied by 100 is the approximate peak breakdown voltage. Capacity measurements of the E and F types are made with the capacitors in the position shown in the above illustration. The C and D types are measured in inverted position.

TYPE "L" CAPACITORS

Perfected ceramic soldering assures permanent rigidity and maintenance of capacitance. JOHNSON ceramic soldering leaves a bond which is stronger than the rugged end plates themselves. There are no eyelets, nuts or screws to work loose which would cause stator wobble and fluctuations in capacity.

Split sleeve tension bearing assures silent operation on highest frequencies. Ceramic end plates, 1 3/8" square with two mounting posts tapped for 6-32 screws on 1 3/32" centers. Mounting (M) dimension is 1/4" more than L dimension.

Two sets of stator contacts. Corrosion resistant, bright alloy plating has low electrical resistance.

These new variables are suitable for the severest conditions of portable-mobile operation. Other capacities and spacings on special order in production quantities.

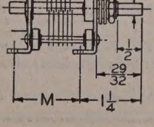
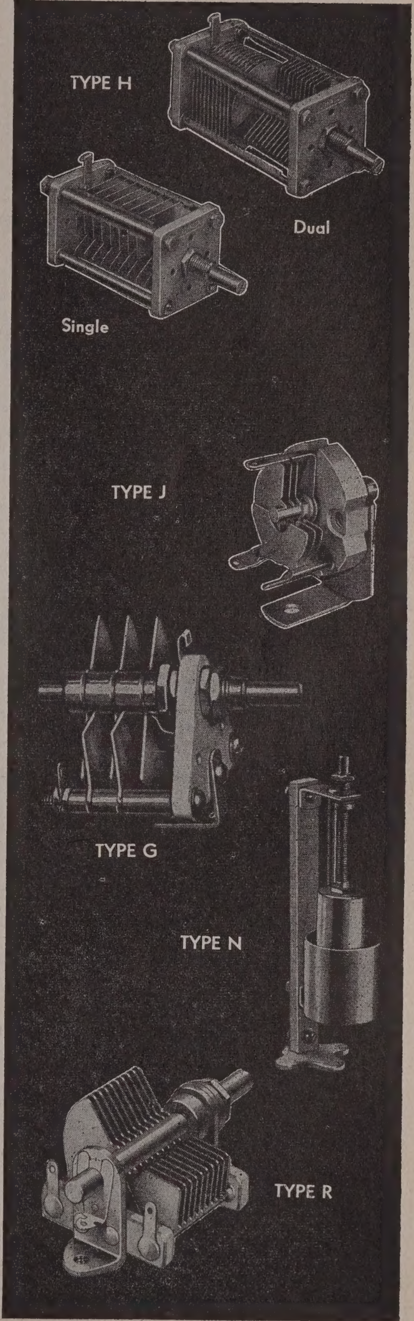
The JOHNSON version of a highly popular standardized capacitor widely used in compact portable and mobile equipment. End plates are of extra heavy nickel-plated brass, Steatite insulating bars. All soldered and riveted construction.

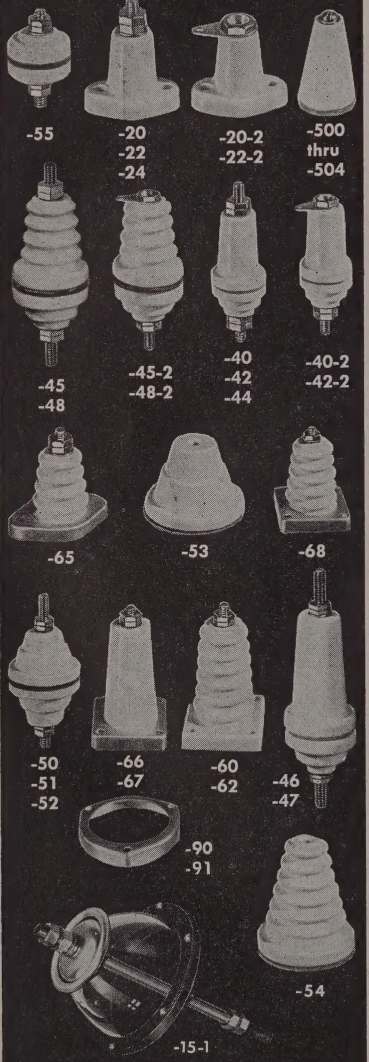
SPECIFICATIONS

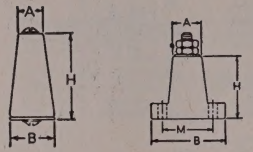
All plates are .0225" thick, of brass with bright allow plating, far more corrosion resistant than cadmium. Spacing is ordinarily .0245", but available on special order in spacings up to .0715". Panel mounting area required; 1-5/8" wide, 1-11/16" deep. Supplied at present only on special order in production quantities. Write for full details.





Steatite and porcelain RF insulators with a long history of user satisfaction. Dense molding and glazing impart fracture resistance together with low moisture absorption. Extended creepage paths provide maximum voltage breakdown compatible with compact design. Relatively large mounting faces permit substantial lateral loads. Heavily nickel plated brass hardware suitable for exposed applications.





STAND-OFF INSULATORS

Steatite insulators combining excellent strength with economy for surface mounting applications. Heavy integral mounting bases; ample clearance for screw heads.

SHAFT COUPLINGS

All JOHNSON shaft couplings are manufactured with high quality, low loss insulation, accurately machined and suitably finished metal parts. Each is capable of many thousands of operating cycles without failure due to fatigue. DC "breakdown" ratings derated in accordance with good engineering practice. The phosphor bronze springs of the -250 and -251 series shaft couplings provide flexibility without backlash and adjust to minor shaft misalignments. Rigid types -252, -262 and -261 meet the requirements of accurate shaft alignment and high torque. The -259 is a bar type shaft coupling recommended for high voltages or very high frequencies. The -264 is a small bakelite insulated flexible shaft coupling for DC or low voltage RF applications.

JOHNSON KNOBS AND DIALS

A distinctive line of matching knobs and dials suitable for the finest electronic equipment. All types are derived from a new basic knob design, the first in years. Knobs have twelve well defined flutes and present an essentially round appearance.

Tough, scratch resistant black phenolic is used for all molded parts. Metal dial scales have an etched satin chrome finish. This contrasts greatly with deeply etched and filled engraving, provides maximum legibility under poor lighting conditions. All types have accurately centered brass inserts for ¼″ shafts.

In addition to the items listed, JOHNSON is prepared to supply variations (in production quantities) such as; special shaft sizes, scales, set screws or indicators.

TELEVISION COILS

S-949

These components when used in a properly designed circuit can provide a gain of approximately 10,000 × in the picture I.F. amplifier with overall response as illustrated. The sound I.F. system can supply a gain of approximately 7,000 × from the converter grid to the grid of the last I.F. tube and a discriminator slope sensitivity of approximately 0.08 volts/kc. with 1.0 volt signal level at the last I.F. amplifier tube grid. The overall sound I.F. and discriminator response is linear over 150 mc.

TYPE "C" DELUXE CABINET RACKS

FOR 19" WIDE PANELS

18½" & 24" DEEP

The beauty of these new enclosed type racks should prove a welcome addition to our line. It will appeal to those who wish to combine the rugged construction of our standard Type "C" racks with modern styling and improved design.

The vertical trims which conceal the panel mounting screws are fastened by means of two "Cowl type" fasteners on each side, which permits the trims to be removed quickly and easily by a half-turn on the screw heads.

The design of the vertical posts permits these racks to be installed in rows or "gangs," without the use of front joining strips between the racks. This provides a greater flexibility in their installation, particularly in broadcast stations.

SMALL SWITCHES, LIMIT SWITCHES, AND MAGNETIC RELAYS

SMALL SNAP-ACTION SWITCH, G-E SWITCHETTE CR1070

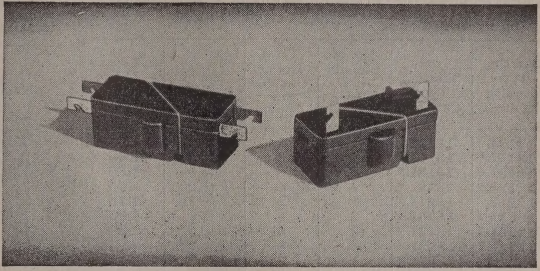
This new, lightweight switch mechanism lends itself especially to applications where space is limited and long life is required.

The Switchette is operated by movement of the spring-return button located in the housing. This button can be actuated by a lever, bellows, or other means. Snap-action, double-break-contact construction gives the G-E Switchette a high current rating and makes it suitable for applications where the vibration is severe.

FEATURES AND ADVANTAGES

1. Small (approximately 1¼ in. by ½ in. by ½ in.) and weighs only 9 grams (0.02 lb).
2. Resists vibration and corrosion.
3. Phenolic-resin operating button provides protection from live parts during operation.
4. Contact tips are 99.95 per cent pure silver.
5. Particularly suited to electronic applications because of negligible amount of contact bounce.
6. Five terminal arrangements are available, including the two shown above.
7. Wide variety of forms available; for example, three basic contact arrangements: single-circuit, normally open; single-circuit, normally closed; and two-circuit, normally open and normally closed. Also many special forms.

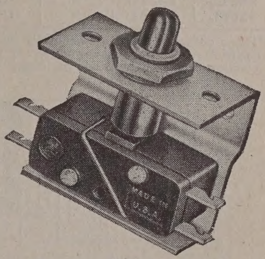
Switchettes are available in ratings up to 10 amperes at 115 or 230 volts a-c. Write for Bulletin GEC-796.



Switchettes showing two terminal arrangements

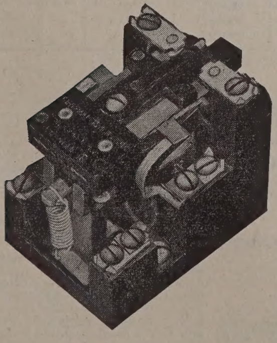
LIMIT SWITCH, CR1070-D112

This sturdy, open-type limit switch is operated by a plunger which provides $\frac{7}{32}$-inch overtravel. The contact mechanism of this device is the G-E Switchette, which can be wired to control one normally open circuit and one normally closed circuit. Rated 10 amperes at 230 volts a-c. Write your nearest G-E Apparatus Sales Office for Bulletin GEC-197.



Open-type limit switch with push-rod operation

GENERAL-PURPOSE RELAY, CR2790-E



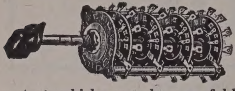
The CR2790 relay is a compact, attractively finished device for use either as a motor starter or a relaying unit. Available in either an open form or enclosed in a general-purpose or explosion-proof housing. Three contact arrangements available: single-pole, single-throw; double-pole, single-throw; and double-pole, double-throw. In the open form, all three contact arrangements use the same base, which facilitates mounting. In the enclosed form, the U-shaped cover makes wiring and servicing convenient. Rated 10 amp continuous, 110/120 volts a-c.

Applications

Control of pilot circuits in response to remote control switch or thermostat, or for direct control of small motors which have built-in thermal overload protection.

As a fractional-horsepower motor starter, or in conjunction with a magnetic switch controlling larger motors, heating or lighting circuits, and signal systems. Bulletin GEC-257.

Multi-Section Rotary Switches



High grade, phenolic-insulated, rotary switches for radio and electronic equipment in circuits not exceeding 500 volts DC. These switches have self-wiping, silver-plated, copper alloy contacts which assure long, useful life. All models feature an adjustable stop. A 2½″ mounting area is required. Mounting depth is dependent on number of sections. Switches have ¼″ round shafts, 2″ long, and ⅜″-32 bushings. Each switch supplied with pointer knob and mounting hardware.

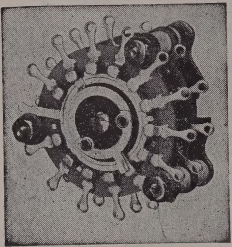
INSTRUMENT AND TESTER SWITCHES (LAMINATED)

Rotary Selector — Single and Multi-Gang — Non-Shorting and Shorting



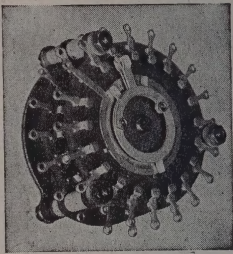
SS-14-2

JBT Instrument-type Rotary Selector Switches are used widely in quality test equipment, portable instruments, inspection setups and avionics where trouble-free, dependable performance is of major importance. Available in two basic types—14 and 20 position—the design gives extra contacts in minimum space. One to six decks.

FEATURES:

Reliability—Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with pure silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf-type (SS-20), and sharp detent assure positive indexing. Springs of both switches are generally replaceable without disturbing soldered connections. Laminated plastic decks and rotors selected for maximum mechanical and dielectric strength.

Exceptional Compactness—14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2-23/32" circle. Each deck above first adds only 5/16".



SS-20-2

Low Contact Loss—Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric—AC or DC; normal carrying capacity (not make-and-break), 1 amp.; maximum momentary capacity (not make-and-break), 5 amp.; maximum voltage between contacts and ground, 1000 volts R.M.S.; between decks and ground, 2000 volts R.M.S.

Military Variations—The following can be supplied on special order at extra cost: (a) laminated plastic, Grade LTS-E-3 or better, per Spec. JAN-P-13; (b) vacuum impregnation of rotors, decks, spacers, and ceramic spacers with approved fungicides; (c) hot tin dip on contact surfaces to be soldered, presently available in 14 positions only; (d) 14 or 20 live positions, no off (add suffix F, as SS-14-2F).

BASIC 14-POSITION: 1¼" Bar knob supplied only on individually packed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, unless otherwise specified. **Contact lugs** and common lugs positioned as shown, 13 contacts per deck. **One to six decks;** for each additional deck (or gang) add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Adjustable Stop** normally is supplied on standard cataloged switches. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

BASIC 20-POSITION: 2" Bar knob supplied only on individually packed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat on shaft, unless otherwise specified. **Contact lugs** and common lugs positioned as shown, 19 contacts per deck, continuous rotation types. **One to six decks;** for each additional deck, add 5/16" to depth. Continuous rotation type supplied unless otherwise specified. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

SWITCH KIT (Laminated Phenolic)

Many of the 14 and 20 position laminated switches shown on this page, plus special variations as needed, can be assembled quickly from the kit shown on an adjoining page. Designers, service engineers, laboratories, and industrial maintenance departments will especially appreciate the convenience, flexibility, and time saved.

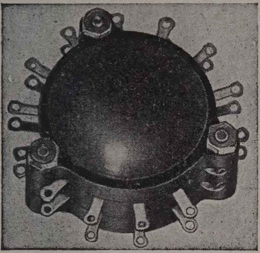
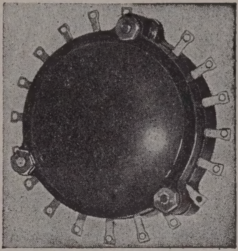
NEW-BUT PROVED-MOLDED ROTARY SELECTOR SWITCHES

Fully Enclosed — Single and Multi-Gang — Shorting and Non-Shorting



MS-14-2

- **All moving contacts enclosed — minimizes dirt and corrosion.**
- **Contact lugs permanently integrated into switch assembly.**
- **Sturdy construction with 3-post deck suspension, double grip collector arms, and rectangular drive shaft through decks for precision indexing.**
- **Interchangeable, electrically and mechanically, with J-B-T 14- and 20-position laminated switches, widely used by industry and Armed Services.**



MS-20-1

FEATURES:

For description of rigid 3-post construction; heavy pure silver plating to meet 100-hour salt-spray test; exceptional compactness; .007 ohm average contact resistance; current-carrying capacity and voltage breakdown; see adjoining page on SS-14 and SS-20 laminated switches. Besides fully enclosing all the moving contact parts, the molded switches differ from the laminated construction in the design of the detent mechanism, but both types provide the positive indexing which quickly identifies the superior quality of J-B-T switches.

BASIC 14-POSITION MOLDED (MS-14): 13 circuits and "off" per deck in 2" circle for compactness. **Molded end cover** regularly supplied on MS-14 series. **1¼" Bar knob** included with individually boxed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, so that knob pointer points to live contact. **Common or "off" contact lug** is bent down for ready identification. **Internal construction:** double-grip collector arms hold contact lug on upper and lower surfaces; collector ring is self-wiping. **One to ten decks** add $\frac{5}{16}$" per deck (or gang) to depth; for eleven decks and over, add ½" to depth for double indexing mechanism; add $\frac{5}{32}$" to depth for adjustable stop mechanism. **Continuous rotation type** supplied unless adjustable stop (type MAS) is ordered or, on quantity orders, pre-set fixed stops are specified. **Panel locator** is available on quantity orders when specified; on MS-14-4 and MS-14-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

BASIC 20-POSITION MOLDED (MS-20): 19 circuits and "off" per deck in $2\frac{23}{32}$" circle for compactness. **Molded end cover** regularly supplied. **2" Bar knob** included with individually boxed units—not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, so that knob pointer points to live contact. **Common or "off" contact lug** is bent down for ready identification. **Internal construction:** double-grip collector arms and self-wiping collector ring are standard construction. **One to seven decks;** add $\frac{5}{16}$" per deck (or gang) to depth. **Continuous rotation type** supplied; on quantity orders, pre-set fixed stops are available. **Panel locator** available on quantity orders when specified; on MS-20-4 and MS-20-6, extra hex nut and longer screw are supplied for inverting supporting screw nearest common, thus converting into panel locator.

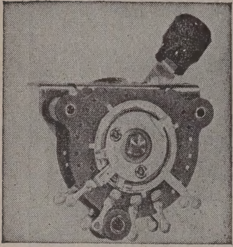
LEVER ACTION SWITCHES, KITS AND SPECIAL SWITCHES

4-Position Lever Switches with Standard Mounting — New 12-Circuit Double-Pole



SS-14-1L4F-2
Two-Deck Lever-Action Switch

Positive Type, 3 or 4 position. These sturdy lever switches are adapted from the well known J-B-T SS-14 series rotary switches, widely specified where quality is the first consideration. Single deck lever models, not illustrated, now are built into tube checkers, inspection apparatus, communications set-ups, and hobby equipment. The new 4-position types, interchangeable except in slot length with the standard 3-position, make an excellent replacement wherever an extra circuit is needed. Mounting dimensions are given below. Holes for 4-36 screws or 1/8" rivets can be supplied on long runs involving set-up charges. Individually boxed with 6-32 mounting **hardware and KN-19 black knob**, as shown. Spacing between single deck switches: recommended 3/4"; minimum, 9/16". Also, see list of available mounting plates.

TWO-DECK LEVER-ACTION SWITCHES. These new 3- or 4-position, 2-deck switches cost a bit more than conventional types, but one look shows why they are worth it, and more! They use the same strong parts, 3-pole suspension, and double-grip collector arms which feature the SS-14 laminated phenolic rotary switches on another page and the 1-deck lever switches on this page. Spacing is 3/8" between decks, the same distance as on TV twinlead wires. Excellent for centralized systems in radio, sound, intercommunication, or public address equipment. Convenient for connecting 3 or 4 single channel TV antennas to one receiver. Bracket mounting holes 1 5/8" apart. Recommended spacing between switches, 15/16"; minimum spacing, 13/16". Non-shorting (break before make), positive action, individually boxed, including KN-19 knob and 6-32 hardware.

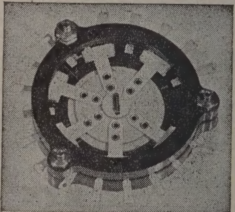
6-POLE or 12-POLE DOUBLE THROW
(Molded Type)



6DT SWITCHES. Double-throw switching, 6 circuits per deck, becomes easy with this unique rotary-type molded switch. SPLICING BLOCKS· PRECISION AND VERTICAL ATTENUATORS

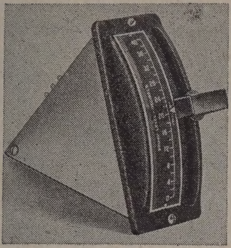
VERTICAL ATTENUATORS



Precision designed and manufactured to perform satisfactorily in every conceivable type of sound equipment, from the most elaborate broadcasting station to the simplest P.A. installation. Easily operated, completely shielded and dustproof. Narrow construction permits as many as seven mixers in one row on a standard 19″ rack.

SPECIFICATIONS:

Noise Level: 130-140 db. below zero level.

Range: Standard units are furnished with 20 steps at 2 db. and inf. loss (off) on last contact........22 contacts.

Circuit: Ladder "T" or potentiometer is standard, other circuits can be furnished to order.

Impedance: Standard values 30, 50, 150, 200, 250, 500 and 600 ohms for ladders, and 250,000 ohms for potentiometers.

Pilot Light Switch: Normally closed, open in off position, S.P.S.T.

Size: 2⅛″* x 5⅛″, depth 4¾″.
*(T-Pads are 2⅝″ wide.)

Insertion Loss: 2 to 5 db. depending on circuit.

Mounting: Two 6-32 screws in center line 4$\frac{13}{16}$″ c. to c. Cut hole in panel 2$\frac{1}{32}$″ x 4½″.

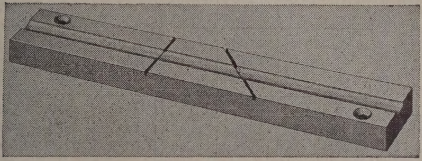
Dial: Linear, etched, easily read.

Contact Arms: Multiple laminated—wiping action.

Shielding: Electrostatic shield, dust proof.

Frequency Response: Flat to 50 kilocycles.

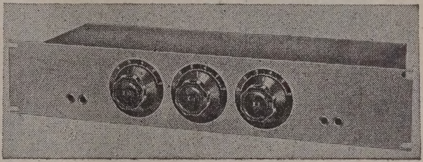
EDITALL TAPE SPLICING BLOCK



A new exclusively designed tape splicing block that can be used in conjunction with any tape recorder using standard tape. Splices can be easily and quickly made with a minimum of time and effort. Made of lifetime Duraluminum with no clips or mechanical parts to go out of order. Can be used as a separate unit or mounted as part of the tape recorder itself. Approximate overall dimensions—6½″ long x 1″ wide x ⅜″ high. Furnished with drilled and countersunk holes for easy mounting.

TYPE 850 PRECISION ATTENUATOR

With the increased demand for precision in laboratory measurement of volume levels, transmission losses, gains of amplifiers, etc., the older methods and standards have become obsolete. The present units are a complete redesign of our older precision attenuators and will serve as laboratory standards. These precision units are now furnished with jack terminals and are completely shielded. They are flat for all frequencies in the audio range and reasonably flat to 200 kc. up to 70 db. They are furnished with either rack or box mounting in gray finish.



SPECIFICATIONS:

Mounting: Type 850-AT and 850-AH, standard rack panels, 3$\frac{15}{32}$″ x 19″ x ⅛″. Type 850-B furnished with dust cover.

Switches: Multiple leaf, silver alloy blades with silver contacts. Ball type detent.

Terminals: Telephone type jacks are used for input and output connections. Solder terminals are provided on rear panels for permanent connections. Insertion of plugs into twin-jacks lifts rear terminal connections.

Type of Resistors: All resistors are non-inductively wound. Negligible phase angle.

Accuracy of Resistors: All windings are adjusted to within 0.1% of the calculated value except on very low resistance values which are adjusted to within 0.25%.

Frequency Characteristics: For "T" configuration, the frequency error is negligible up to 80 db. loss, below 50 kilocycles. Balanced "H" configuration should be used where measurements above 50 kilocycles are necessary.

SPECIFICATIONS

CONTACTS: Zinc-silver alloy is standard. Coin silver, fine silver and others can also be supplied in production quantities. For coin slver, the last digit of part number is changed from 1 to 2. Example: AJ-182.

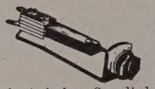
BUSHING: Plain brass is standard. Available with nickel-plate when specified. For nickel plated bushings, last digit of part number is changed from 1 & 2 to 3 & 4 respectively.

SPRINGS: Spring tempered phosphor bronze, nickel plated, with soldering terminals hot tinned.

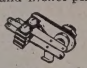
INSULATION: Spacers made of natural, grade XXP laminated phenolic, wax impregnated; screw insulating tubing is polystyrene or hard rubber depending on the required length. Lifters, when used, are made of dark bone fibre, wax impregnated. The leaf insulators, when used, are made of natural fabric base laminated phenolic, wax impregnated.

FRAME: Cold rolled steel, cadmium plated.

LONG AND SHORT FRAME JACKS

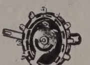


LONG JACKS . . . The original long jacks were adapted from the telephone switchboard jacks. Long rugged, phosphor-bronze springs parallel to the plug axis give precise action. These jacks take minimum panel mounting space, less than the short jacks. Supplied with nickel-plated hex. Shoulder mounting nut and nickel-plated washer.



SHORT JACKS . . . Carter short jacks are small and compact, but do a full-sized job. Depth behind the panel is cut down by placing the tempered nickel-silver springs parallel to the panel. High quality sheet bakelite and tubular ebonite insulators are used throughout—no paper or fibre used in Carter Jacks. Supplied with nickel-plated hex. mounting nut and nickel-plated washer.

Short and long jacks mount in single ⅜" hole in panels up to $\frac{5}{16}$" thick. Fit of the plug in the jack is not affected by the thickness of the panel. Fit all standard plugs in two and three conductor types. Strong bright cadmium plated steel frame. All contacts between springs are fine silver, giving minimum contact resistance.



"imp" TAP SWITCH

Bushing length ⅜" Shaft $\frac{9}{16}$" from end of bushing.

Positive snap action — strong wiping contact grounded to shaft and bushing. In operation, contact breaks between makes — non-shorting.

A TRADE-MARK OF QUALITY

PRINCETON, INDIANA

On these pages we list a few of the relay types we class as standard.

Stocks of either completed relays shown or component parts on hand assure prompt delivery. From these relays a type can be selected for almost any application.

All contact ratings given are for 115 volt 50-60 cycle, non-inductive load. All coils are baked varnish impregnated to government specifications, for protection against moisture and mechanical damage.

To actuate relays from 220 V. DC line use a 110 V. DC relay with a 5 watt wire-wound resistor with resistance approximately the same as the relay coil, in series with relay winding.

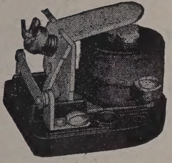
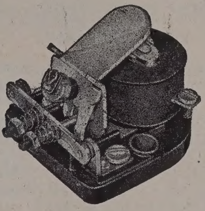
MS Series—MOTOR STARTING RELAYS VOLTAGE ACTUATED



MS 2A



MS 4A

Voltage controlled relay insures throw-out of the starting winding when motor reaches rated speed regardless of the load on the motor. May be mounted on the motor or remotely located. Ideally suited for use with hermetically sealed or explosion-proof motors that are capacitor start, induction run. Operates on back EMF of running winding.

Pull in voltage can be varied over a wide range by adjusting armature gap. Unusual design permits an exceptionally wide differential between pull in and drop out voltages. Normal adjustment for 115 volt motors is to pull in at 140 V and release at 40 V or less. For 230 V motors, pull in at 255 V and release at 80 V or less.

MS2A single break relay for capacitor start induction run motors up to 1 HP.

MS4A double break relay with high current contacts for capacitor start, induction run motors up to 3 HP.

Dimensions: 2 3/4" x 2 1/16" x 1 7/8" high. Mounted with two 5/32" dia. holes on 1 9/16" centers.

When ordering, specify type, coil resistance and motor-line voltage.

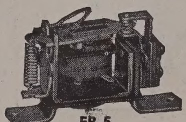
FR Series—PHOTO FLASH RELAYS



FR-5

Designed for photo flash units using a high voltage discharge through a gas filled tube requires a relay with extremely high voltage breakdown insulation. When the bulb is flashed, the contacts must carry an extremely high surge of current without sticking, burning or pitting. The repetitive accuracy must be as uniform as a precision built shutter on a fine camera. Unfailing positive contact is vital to synchronization of the shutter with the high voltage capacitor discharge.

The FR relay has been proven under the most severe conditions of temperature, humidity and shock. Contact material and extremely high breakdown insulation between ground and all current-carrying parts combine to give a reliable relay at economy prices. Breakdown 3,000 volts minimum between current-carrying elements and ground.

Dimensions: 2 31/32" x 1 3/16" x 1 5/8" high. Mounted with two 5/32" diameter holes on 2 5/8" centers.

RELAYS DESIGNED IN ACCORDANCE WITH OUR INTERPRETATION OF UNDERWRITERS SPECIFICATIONS.

These Spemco magnetic relays can be used for remote control of electric power and lighting loads, pilot lights and audible signals. It may also be used for controlling small single phase motors, serve as circuit switching relays for machine tools, processing control, electrical interlocking systems, electronic applications, follows a "Bug" F B and many other applications too numerous to mention; however, relays serve as control devices only and do not provide motor overload or short circuit protection.

MAGNET COILS for AC Coils only. Relay coils are available for voltages ranging from 1½ to 220 volts with commercial frequencies of 25, 50 and 60 cycles. Coils are designed for continuous service and will operate safely at plus 10% or minus 15% rated voltage.

All coils are designed for 50/60 cycle service for any given voltage rating. Coils will pick up readily at 80% of rated voltage. All magnet coils are impregnated and baked.

POINTS. Fine silver to silver contacts provide long life and low contact resistance. Silver contacts never require cleaning or dressing and do not corrode, thus reducing maintenance. Substantial contact pressure assures dependable contact action even on light loads or low voltages.

All wiring terminals are accessible from the front of the relays and are so arranged that relays may be mounted on minimum centers without obstructing wiring terminals of adjacent relays. All Steel parts are plated.

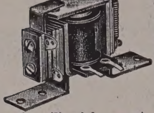
RELAYS
FOR AMATEUR AND INDUSTRIAL USES

NATIONAL ASSOCIATION RELAY MANUFACTURERS
NA RM

MINIATURE RELAYS



These units are very compact and are especially designed for plate circuit and general purpose control application. Overall dimensions: MR 1⅞″ x 1⅜″ x ⅞″—MRD 1⅞″ x 1⅜″ x 1¼″. Contacts are fine silver rated 5 amps at 115 V. All AC relays are free from hum and AC chatter. The MR-2 and MRD-2 have 2500 ohm coil, will pick up at 6 ma. and 12 ma. respectively. The MR-5 and MRD-5 have 5000 ohm coils, will pick up at 3 ma. and 7.5 ma. respectively. The drop out value of these relays is approximately 50% of the pick up value.

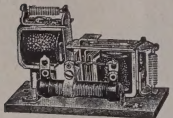
OVERLOAD RELAYS



Adjustable overload relays provide accurate and positive protection against current surges and continuous overloads. Contact arrangements SPDT using 3/16″ fine silver contacts. This allows the use of either audible or visual signal to advise of overload. All models are of the electrical reset type which allows remote control resetting of the relay. Size—3¾″ x 2″ x 1½″.

Type	Current Range	Reset Coil	Net Prices

LATCHING RELAYS

These relays are employed where it is not desirable to have current continuously on the coil. The latching arrangement is such that when the relay coil is energized the armature closes and locks in a closed position by mechanical latching. An electrical impulse on the reset coil releases the armature from the latch and allows the relay to assume its initial position. 3/16″ fine silver contacts. Bakelite Base. Size—3¾″ x 2″ x ¾″.

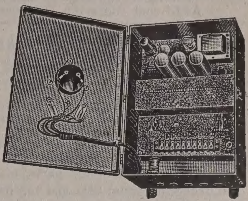
FOTOLECTRIC COMBUSTION SUPERVISOR

A three-piece set consisting of Exciter Lamp, Photocell Receiver and a choice of three Electronically Operated Relay units. Operates on the smoke detection principle. Dependably sets into operation the controls that maintain combustion efficiency. Fotolectric units are mounted opposite each other on the boiler breeching, so that the beam of light traverses the flow of smoke. A predetermined increase in density of smoke operates whatever alarm or automatic control equipment is used.

Electronically Operated Relay and Contrcl Cabinets available in three models:

MODEL No. 71A — For use where no time delay is necessary. Usually used as an alarm device, and to actuate automatic combustion control equipment.



MODEL No. 71B — Equipped with input time delay circuit to prevent needless operation of control equipment from voltage drop or short puffs of smoke.

MODEL No. 71C — Same as Model 71B plus additional time delay holding circuit to continue operation of combustion control equipment for a predetermined period of time. Prevents cycling of equipment.

FOTOLECTRIC FIRE PROTECTION

The Worner Fan Motor Stop installed on ventilating ducts detects smoke, gives alarm, stops fan to prevent fan-driven fire to a succession of outbreaks. Approved by Underwriters Laboratories. For full details, write for Bulletin 650.

be sure with GENERAL DRY BATTERIES

GENERAL dry batteries contain many outstanding advancements such as extra heavy seamless extruded zinc cups, the famous paper thin separator permitting more mix and more active zinc area by utilization of the cell bottom, the curled rim lock seal which seals each cell individually. These features, found only in Generals, assure long shelf life as well as the maximum in dry battery performance.

GENERAL A & B RADIO FARM PACKS

General A-B packs are made with L size cells in the A section. These cells are 40% longer than the largest conventional 1¼" diameter cell. This construction assures the perfect balance between these "A" and "B" sections for current drains established by the Radio Industry.

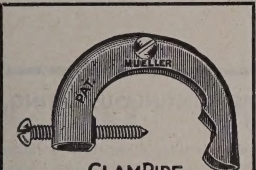
CLAMPIPE GROUND CLAMP



CLAMPIPE
U.S. PATENT No. 1,794,976

No. 58

The exclusive patented feature of a U-shaped cross section in combination with a U-shaped clamp gives a rigidity and effectiveness to the ClamPipe that cannot be found in any other make.

The ClamPipe will not bend or lop over when applied to a pipe. The point of the large case hardened screw, cuts through rust, paint or corrosion into clean, fresh metal, insuring a good contact. The Clamp may be installed on a pipe lying flush against a wall. Will not spread open.

The best ground clamp value on the market. Applicable to pipe ⅜" to 1⅜" outside diameter.

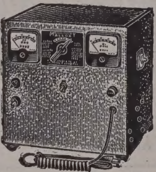
Mallory 6RS25 Heavy Duty Six Volt DC Power Supply



The Mallory 6RS25 6 volt, 25 ampere rectifier type power supply is designed to replace storage battery-charger combinations for bench testing medium power 2-way mobile-phone equipment. It may also be utilized for non-radio uses requiring well-filtered low voltage DC in the 25 ampere range. Heavy sheet-steel housing makes it adaptable for use in garages as mobile radio bench equipment.

The 6RS25 operates from a standard 115 volt 60 cycle source to supply DC voltage from 0 to 8 volts at continuous or variable loads of 0 to 25 amperes. Intermittently, it will supply a maximum of 40 amperes at 6 volts.

An adjustable variable control allows quick selection of any voltage from 0 to 8 at 0 to 25 amperes. Three capacitors totaling 30,000 mfd. filter the output to less than 1 volt ripple and suppress RF and power line interference. A 0-10 volt DC voltmeter and a 0–40 ampere DC ammeter are included.

Conduction cooling of the full-wave Selenium Rectifier Cells, automatic overloading protection, and a self resetting circuit breaker insure long life.

Overall dimensions—11″ high, 10½″ wide, 8¾″ deep. Shipping weight—26 lbs. Catalog No. **6RS25** **$74.50** Net

Mallory 12RS6D Bench Power Supply

The Mallory 12RS6D is a dual purpose bench power supply designed for use on the radio service bench for operating conventional 6 and 12 volt automobile and truck radio sets. Fully AC-operated from the 115V/60 cycle line, the 12RS6D supplies rectified and filtered DC in either of 2 ranges. Range "A" supplies 0 to 16 volts at 6 amperes continuously, or 12 amperes intermittently. Range "B" supplies 0 to 8 volts at 10 amperes; or 20 amperes intermittently. Both ranges are infinitely variable from zero to maximum output to permit precise adjustment of bench test voltages. The 12RS6D is equipped with a DC voltmeter, a DC ammeter, infinitely variable voltage control, a range switch, an on-off toggle switch, automatic overload protection, primary fuse and rubber-covered line cord and plug. The rectifying system employs a full-wave metallic rectifier. The cabinet is sheet steel finished in blue enamel and measures 6¾″ high, 10⅝″ wide and 5½″ deep. Shipping weight approximately 8 lbs. Catalog No. **12RS6D** **$39.95** Net

Mallory 12RS5 Bench Power Supply

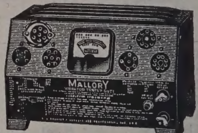
Similar to above, but provides single output range of 0-16 volts at 5 amperes. Catalog No. **12RS5** **$34.95** Net

Mallory 6RS10 Bench Power Supply

The Mallory 6RS10 6 volt power supply has been designed as a convenient source of DC current wherever 115 volt AC current is available. It is particularly suited for testing of automobile radio sets and has ample power to operate those with electrical tuning mechanisms. DC voltage is continuously variable from 0 to 8 volts. The unit may be safely operated continuously at 10 amperes and intermittently at 20 amperes. A 10,000 mfd. capacitor is employed as an efficient filter. Full-wave rectification is obtained from a conservatively rated Mallory Magnesium-Copper Sulfide Rectifier Stack.

The power supply is fully equipped with a 0-20 ampere DC ammeter, a 0–10 volt DC voltmeter, a self resetting circuit breaker in the DC line, a switch and fuse in the AC line, and a six foot AC cord. Overall dimensions: 6¾″ wide, and 5½″ deep. Shipping weight approx. 13 lbs. Catalog No. **6RS10** **$36.75** Net

Mallory Vibrator Testers



The Mallory Vibrator Testers have been designed as companion units to the famous Mallory Service Bench Rectopower® Supplies 6RS10, 6RS25-1, 12RS5, 12RS6D or 12RS14D (acting as variable power supplies) to test directly, without adapters, most of the popular vibrators and all of the 6 volt passenger car radio vibrators used since 1940. Either 6X5 or 0Z4 rectifier tubes may be plugged into the front panel, thus permitting interrupter vibrators to be tested in conjunction with the rectifier tube with which they normally work in the equipment. Defective vibrators or rectifiers can readily be determined by the substitution method. Self rectifying vibrators are tested by removing the rectifier tube. Either shunt or separate drive vibrators can be tested of any frequency from 100 to 250 cycles. The condition of the vibrator being tested may be read directly from the "good-bad" meter scale. Shipping weight approximately 8 lbs.

Mallory Six and Twelve Volt Fast Chargers —Unfiltered DC Power Supplies

6AC75
12AC60D

Mallory Fast Chargers, designed in extremely compact form, provide the advantages of portability with high-charging currents. Light weight, small size, perfect balance and a convenient carrying-handle make them ideal for one man to transport directly to the job for most efficient operation. Suitable for use wherever a reliable source of 6 volt, high amperage power is required, such as: garages, filling stations, parking lots, electrical service shops, schools and testing laboratories. The portability of these units provides many advantages over the conventional stationary or semi-fixed type supply.

Despite their small overall size, these Mallory Fast Chargers are ruggedly constructed with full-size components. Heavy duty, metallic rectifiers, connected in full-wave circuits, are cooled automatically by means of built-in, electrically-operated fans, assuring long life and effective service under the most severe conditions. Strong sheet-metal cabinets offer adequate protection against accidental damage. A tough, white enamel finish not only adds to the appearance of these units but also protects the metal cabinet from rust and corrosion.

Operating refinements found in Mallory Fast Chargers, usually omitted in conventional fast chargers, permit both fast or slow charging rates by the throwing of a panel switch. Three rates of fast charge and three rates of slow charge may be selected by means of a positive acting, rotary panel switch. A panel-controlled, synchronous motor, timer mechanism with a range of from 1 through 57 minutes in increments of 1 minute is a standard part of these units. When pre-set, this timer automatically disconnects the charger from the 115V/60 cycle line at a predetermined time up to a maximum of 57 minutes. A switch is included to disconnect the timer motor for continuous operation when using the charger as a power supply.

All Mallory Fast Chargers are equipped with: easy-to-read 2¼" ammeters to indicate charging rates; abrasion-resistant, rubber-covered, 6-foot, AC-line cords; and heavy-duty, 2-conductor, 12-foot, rubber-covered cables to which large copper battery clamps are attached. Each charger is equipped with racks to accommodate the power cables when not in use. Cabinet dimensions are: 7¼" x 6½" x 15". AC input is 115V/60 cycles, single phase, for both models.

Model 6AC75 is rated at 75 amperes with a minimum DC voltage of 6 when used as a fast charger on a 3-cell battery. An output of 60 amperes at the same voltage may be obtained when using this model as an unfiltered power supply.

Catalog No. **6AC75** **$109.50** Net

Model 12AC60D has a dual range output selected by means of a panel switch. Range A: 6 volts DC at 90 amperes when employed for battery fast charging and 65 amperes at 6 volts when employed as an unfiltered power supply. Range B: 12 volts DC at 60 amperes for battery fast charging and 45 amperes at 12 volts when employed as an unfiltered power supply.

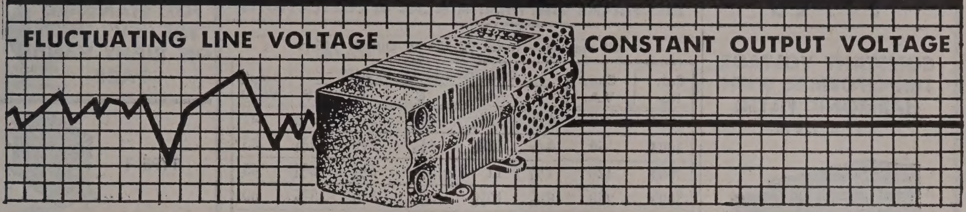
SOLA *Constant Voltage* TRANSFORMERS

SOLA Electric Co. • Chicago 50, Ill.



Automatic Instantaneous Voltage Regulation

SOLA Constant Voltage Transformers are static magnetic voltage regulators. They are designed to provide a constant output voltage which is unaffected by changes in input voltage. You will find, listed in the following pages, the widest range of ratings and types available from stock offered by any manufacturer.

In addition, CUSTOM DESIGNED UNITS can be manufactured in capacities from 1 V.A. to 25,000 V.A., to suit your individual specifications. When ordered in substantial quantities, they cost only slightly more than standard units of the same general size. Often, time and money can be saved by direct use or modification of a regulator from the several hundred special designs on file. Custom designs can include: SPECIAL VOLTAGE RATIOS, SPECIAL FREQUENCIES, COMPENSATION FOR FREQUENCY VARIATION, MULTIPLE OUTPUT VOLTAGES, THREE-PHASE SERVICE, and MILITARY SPECIFICATIONS.

SOLA Constant Voltage Transformers have eight distinct advantages over regulators which depend solely upon saturation of core materials for their regulating action, or electronic type regulators:

1. Response time, 1.5 cycles or less.
2. No moving or renewable parts . . . no manual adjustments.
3. Completely automatic continuous regulation.
4. Self-protecting against short circuits.
5. Current limiting characteristic protects load equipment from excessive fault currents.
6. Can often be substituted for conventional non-regulating transformers.
7. Relatively compact.
8. Provide isolation between input and output circuits.

For complete operational data write for Bulletin L-CV-142

* These units are supplied with an "L" terminal which allows connecting in the field to limit the output voltage to the applied voltage. If "L" type connection is required on other models, the "L" must be included in the type number when ordering.

‡ When these POWERSTATS are "L" connected so that the output voltage does not exceed the applied voltage, the frequency range is 50/60 cycles.

** When a motor-drive is required, prefix the letter "M" together with the speed designation letter to the type number. Z — 6 seconds, Y — 14 seconds, X — 19 seconds and W — 45 seconds for full range travel. Since the driving motors are frequency sensitive, be sure to specify whether 50 or 60 cycles is required. Only manually-operated unit weights are listed. For motor-drives add 10, 11 and 14 pounds to the 116-216, 1126-1226 and 1156-1256 types, respectively.

to 100 KVA

EFFICIENT • ACCURATE • DEPENDABLE

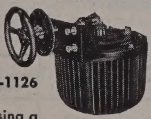
POWERSTAT variable transformers are autotransformers of toroidal core design with a movable brush tap which is rotated to deliver any desired output voltage from zero to, or above, line voltage. Glass smooth commutator surfaces and advanced winding techniques assure smooth operation and permit adjustment to a fraction of a volt. Other important features include: excellent regulation, high efficiency, conservative ratings, zero waveform distortion and rugged mechanical construction.

A wide range of standard POWERSTAT variable transformers are available for 115, 230 and 460 volt, single and three phase operation. Both manually-operated and motor-driven types are offered. The rating chart lists some of the most-called-for standard POWERSTATS. Others — specifically designed to customer requirements — are available to fulfill each application. Consult us about your specific needs.

STANDARD TYPES for VARIED APPLICATIONS

POWERSTAT VARIABLE TRANSFORMERS FOR

OIL-COOLED OPERATION

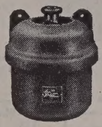


TYPE O-1126

By immersing a POWERSTAT in transformer oil, the rating above normal air operation is increased and duty in a corrosive atmosphere is possible. A standard line is offered in various ratings and sizes.

EXPLOSIVE ATMOSPHERES

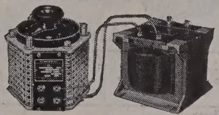
TYPE X-1126



To provide safe operation in hazardous areas where a small arc or spark could cause an explosion, explosion-proof POWERSTATS are available. Standard models are approved by Underwriters' Laboratories for Class 1, Group D service.

HIGH CURRENT NEEDS LIMITED OUTPUT RANGE

TYPE 2106LC



Relatively large amounts of power can be controlled by a small POWERSTAT when used in conjunction with a fixed-ratio transformer. This combination is known as a POWERSTAT Line Corrector. It can be used to correct line voltage variations to maintain a specified output voltage and to supply a limited output voltage range. A multitude of ratings are available.

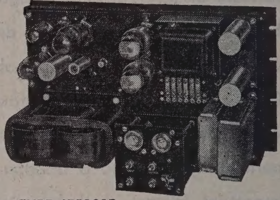
TYPE IE51002R



TYPE IE5101R

TYPE IE (INSTANTANEOUS ELECTRONIC)

for the most exacting control

Type IE is completely electronic in operation with no moving parts. Providing instantaneous correction, it is ideal for laboratories, test lines, as a component of other equipment . . . and everywhere that the most exacting voltage control is required. At no load, full load or any intermediate stage, constant output voltage is maintained regardless of line fluctuations. The output voltage is held to within ±0.1 volts of nominal for wide line variations and within ±0.15 volts of nominal for any load current or load power factor change from .5 lagging to .9 leading. Waveform distortion never exceeds 3%. Standard types are listed below. Consult us about your specific requirements.

TYPE EM (ELECTRO MECHANICAL)

for large industrial loads . . . for applications requiring zero waveform distortion and high efficiency

Type EM is an electro-mechanical device with a very sensitive detector controlling a motor-driven POWERSTAT variable transformer and auxiliary transformer. While not instantaneous, Type EM corrects faster than most other automatic voltage regulators. Highly efficient in operation, it finds widest application in controlling large industrial loads and also in electronic equipment where zero waveform distortion is essential. Features include: complete insensitivity to the magnitude and power factor of the load, no effect on system power factor, no critical adjustments and adjustable output voltage. Standard types listed below.

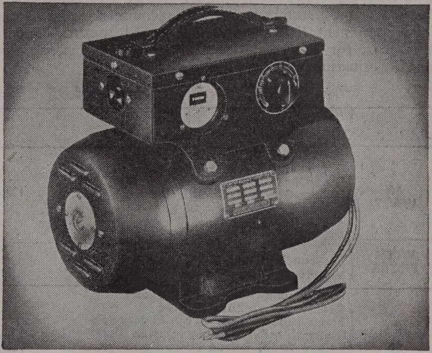
FREQUENCY CONTROLLED CUSTOM FOR PROFESSIONAL AND BROADCAST TAPE RECORDING



The new Custom Converter with manual frequency control has been developed to provide a portable DC to AC power source for professional and broadcast tape recorders, heavy duty electronic measuring devices, and Tape recorder-AC motor driven camera combinations. Now for the first time, sufficient frequency constant AC power is available to operate this type of equipment from DC lines or battery source.

The rheostat control and the frequency meter are mounted in the attractive aluminum housing. A noise filter is also available in the same housing, although it is not usually necessary for operating recorders, amplifiers or other audio devices. Filtering is required when radios or other RF circuits are operated from the converter.

Convenient recessed DC male plug is furnished for 32, 64, 115 and 230 volt DC input models. 12, 24 and 28 models are equipped with heavy stranded input leads for battery connections, as shown. A flush AC mounted receptacle is supplied on all models for quick AC connections. The sturdy carrying handle allows the converter to be moved immediately after its operation, a life-saver for taping remote broadcasts.

Each model must be designed to properly match the power factor, voltage, frequency, and load requirements. Any of the Custom models can be furnished with frequency control. Model listed below has been laboratory tested and is matched to provide perfect operation. Kindly send your special requirement to the factory for prompt and careful consideration.

Carter Custom-Matched Converters for Popular Wire and Tape Recorders-Sound Projectors-Phono Motors-Television

Whenever DC to AC Rotary Converters are used to power wire and tape recorders or other similar recording equipment, the Converter AC output frequency and Converter Power Factor must be perfectly matched to the recorder load to assure proper recording and play back performance. Most wire and tape recorders are of medium Power Factor design, approximately 70%. Standard high power factor (85 to 100%) Rotary Converters therefore *will not operate* the recorders properly as this type Converter will produce higher AC voltage and frequency because of the inductive recorder load. It is imperative therefore, only factory-tested and recommended Converters be selected for wire and tape recorder operation.
The equipment listed below has been laboratory-tested and the correct Carter Converter recommended for each model. Use this chart for your recorder Converter requirements. If the equipment is not listed on the chart, please write to the factory and information will be supplied, if available.

HIGH FIDELITY TRANSFORMERS

CHICAGO STANDARD TRANSFORMER CORPORATION

HIGH FIDELITY OUTPUT TRANSFORMERS

Better than ±1 db from 20 to 20,000 cps.

These Stancor output transformers combine the most advanced design and manufacturing practices to provide outstanding audio response at low cost. Maximum power level is conservatively rated at 50 watts. They are designed to match the most popular types of output tubes to speaker or line impedances. Extensively interleaved "trifilar" windings, extremely tight coupling and careful electrical balance result in audio fidelity to please the most critical specialist. Inasmuch as elaborate shielding is not required at the audio output level, an inexpensive, but thoroughly practical, Type C mounting is used. Shipping weight is 6.5 lbs.

TRANSISTOR TRANSFORMERS

Here are the smallest iron core audio transformers ever built. They weigh less than 1/10 ounce and are no larger than the transistors they power. Write for Bulletin 462 showing typical circuit application.

These transformers are designed primarily for transistor audio application but they can be used wherever low power is involved. Useful range, below 1 mw level. They are constructed of extremely fine wire, wound on molded nylon bobbins, with special nickel alloy steel laminations. Mounting style is coil and iron only.

SPECIAL Stancor ultra-miniature transistor transformers, designed and built to your requirements, can be supplied in quantities of five or more. Send your specifications for information on price and delivery.

MINIATURE HIGH FIDELITY AUDIO TRANSFORMERS

Stancor Tinytrans are miniature transformers made with nickel steel laminations. They have an exceptional frequency response for units of this size; ±1 db. 30-15,000 cps, Maximum level 0 db. Write for Bulletin 463 showing frequency response curves on these transformers.

These units are sealed and potted in ⅞" square, anodized aluminum cases with phenolic terminal boards. Total height, including terminals, is 1¼". The case has two 2-56 threaded inserts, 11/16" centers, for easy chassis mounting. The entire transformer weighs only 1.3 ounces. Mounting type UM.

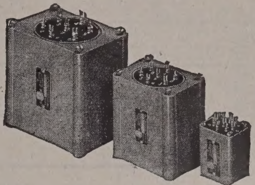
HF AND WF SERIES HIGH FIDELITY AUDIO TRANSFORMERS



HF Series

These units have a wide frequency response of 20 to 20,000 cps with ±1 db. Correct design reduces harmonic and intermodulation distortion to a negligible amount. Balanced construction minimizes hum pickup. Stancor impregnation insures long life. Cases are finished in gray enamel and have four threaded holes at each end for flush mounting. Stud-type terminals are plainly marked for easy identification.

POLY-PEDANCE DRIVER MULTI-TAPPED UNITS FOR USE IN CIRCUITS WHERE THE OPTIMUM RATIO CANNOT BE PREDETERMINED.

Driver circuit changes often require new transformers. Many times it is impossible to match correctly tubes involved with a specific transformer, with high distortion resulting. *Poly-Pedance* units solve that problem; three transformers with the maximum number of usable ratios will match the driver tubes to any Class B modulator grid circuit without exceeding the power capabilities of the driver tubes.

MULTI-PURPOSE INTERSTAGE—PIE-WOUND SPLIT SECONDARIES

May be used as a single plate to single grid, single plate to push-pull grid, or push-pull plate to push-pull grid interstate transformers. Overall ratios are 3:1, however, primaries are center-tapped and secondaries have split windings, thus providing ratios of 1:1, 3:1 and 6:1 in either step-up or step-down applications.

POLY-PEDANCE MODULATION MULTI-TAPPED UNITS TO PROPERLY MATCH THE OUTPUT OF THE MODULATOR STAGE TO THE MODULATED LOAD. WILL MATCH ALL COMMON IMPEDANCES OF CLASS "B" MODULATOR (2,000 to 20,000 OHMS) TO CLASS "C" LOAD IMPEDANCES OF 2,000 TO 20,000 OHMS.

The number of excellent transmitting tubes available is constantly increasing. R.F. applications, too, have increased and it is sometimes difficult to obtain the correct modulation transformer suitable for matching some given modulator tubes or R.F. load. These units give an almost unlimited range in power and impedance ratings to assure a correct impedance match in all cases.

Testing Autoformer—Designed especially for various service and test application. Incorporates a convenient tap switch to permit variable voltages from 90 to 150 volts. It may be used to apply an overload voltage to amplifiers, radio receivers, or other electronic devices being serviced, which will indicate and cause suspected parts to break down. Primary equipped with 6 ft. approved cord and plug. Secondary connected to female receptacle.

LINE ADJUSTING AUTOFORMERS

Stancor Line Adjusters permit operation of electrical devices at 115 volts when the supplied voltage is 65, 75, 90, 100, 115, 130 or 145. They are also useful for altering a 115 volt line above or below that level. The line adjuster input is correctable in seven steps by means of a selector switch and is accurately indicated by an output voltmeter. The meter has a convenient red-line marker at 115 volts on a 150 volt scale.

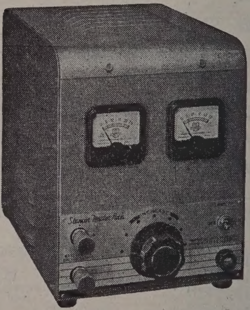
SIX VOLT DC POWER SUPPLY



The Stancor Model 752 Master Pack replaces bothersome storage batteries, meeting the needs of the serviceman for a six volt power supply that is practical in design, convenient to use, and large enough to handle heavy-duty jobs.

The Stancor Master Pack is conservatively rated to provide 6 volts D.C. at 12.5 amperes continuously from the standard 115 volt, 50–60 cycle source. An instantaneous rating of 25 amperes makes the Model 752 ideal for demonstrating or testing auto radios with push-button or floor-switch magnetic tuning. Reserve power permits simultaneous operation of two or more receivers. Separate voltmeter and ammeter afford a continuous, visual check of voltage and current delivered to load. Meter needles are damped to prevent annoying "wiggle." The extractor-type line fuse gives positive protection against damage from excessive overloads. Thorough filtering, less than 3% ripple through a choke-capacitor filter, allows use in applications where the hum from a poorly filtered power supply cannot be tolerated. Selenium rectifiers are used for dependability and cooler operation. Controls and terminals are conveniently located on the front panel. The sturdy steel case is finished in durable gray hammertone. No detail has been slighted in making the Stancor Model 752 Master Pack the outstanding power supply for the service bench. Size overall, 9½″ high, 7⅜″ wide, 12″ long. Weight in carton, 30 pounds.

Hermetically Sealed POWER COMPONENTS
50-60 Cycle

The MIL-T-27 procurement specification is written to assure our military services of transformers which will give continuous and unfailing service under extremely adverse conditions of climate and overload. Good commercial equipment also must use only the best obtainable components since failure would cost much more in "down-time" than the savings in cost of parts.

TRIAD "HS" Series Power Transformers are designed to fill these stringent applications. These are the finest transformers available.

Avoid redesign—Use Triad HS and HSM transformers in military prototypes.

Since Triad HS and HSM series transformers use MIL-T-27 standard sizes, plus electrical and mechanical design to meet all MIL-T-27 requirements, equipment using these transformers need not be redesigned to submit for military approval. The basically good design factors which are necessary to meet MIL-T-27 standards for performance ensure longest life in any class of service.

These transformers are permanently marked with electrical and test data as specified in MIL-T-27. All are "Climatite" treated, use sturdy TRIAD terminals and are beautifully finished in grey enamel.

HIGH FIDELITY OUTPUT TRANSFORMERS

TUBE TO LINE — TUBE TO VOICE COIL — LINE TO VOICE COIL

Hermetically Sealed HIGH LEVEL OUTPUT

TRIAD "HS" Series Output Transformers represent the application of the most modern techniques in the design of fine audio equipment. Use of the very best core materials, combined with interleaved coil structures, have resulted in an open circuit inductance to leakage inductance ratio of 10,000, representing a frequency response range of better than 13 octaves. These transformers will deliver full rated power output within 1 db from 7-50000 cycles. Full DC plate current can be carried through the primary windings, but every effort should be made to balance the two plates in push-pull circuits to obtain optimum results at the extreme low frequencies.

TOROIDS

TOROIDS for Filter Components

The nearest practical approach to perfect inductance of no resistance, no capacity and infinite "Q" is made by winding on a pressed molybdenum permalloy dust core of toroidal shape. Depending on size and composition of core materials, Triad Toroids will develop (under certain conditions) "Q"'s of greater than 200, inductance values up to 25 Henries on the EH series and stability with level, temperature and humidity almost beyond belief.

Triad Toroids, adjusted to within 1% of the values shown, are ordinarily encapsulated in a clear plastic material, but may be obtained in a hermetically sealed case if desired. When ordering hermetically sealed Toroids, order by the uncased number, followed by the letters HS.

Special inductors, made to your specifications as to inductance and "Q," may be ordered from the factory. Prices on request.

PULSE

These miniature blocking oscillator transformers are now in quantity production for manufacturers in a number of applications and with outstanding results. Their multiple winding construction makes them available for a variety of circuits and their fast rise time (.05 microseconds) makes them exceptionally useful. Positive hermetic sealing prevents deterioration of performance with time (absolutely necessary for long shelf life).

As a Hybrid Transformer	This precise matching transf. is an excellent hybrid unit for operation from two 250/300 ohm sources. Balancing resistor of approx. 125/150 ohms required in pri. circuit. For max. attenuation between sources the exact value of resistor should be determined from measurements made in circuit where transf. is used. Correct value will yield average attenuation of 27 to 30 db with a max. attenuation of approx. 50 db at some point between 500 cps and 1,000 cps.	500 or 600	250 or 300	250 or 300	500-125 or 600-150	+23 dbm

LINEAR STANDARD AUDIO TRANSFORMERS

LINEAR STANDARD AUDIO UNITS FEATURE:

UNIFORM FREQUENCY RESPONSE . . . at low frequencies, is effected through the use of HIPERM-ALLOY, a STABLE nickel iron alloy of very high initial permeability. Uniform high frequency response is the result of multiple section interleaved windings arranged in a semi-toroidal coil structure. This, plus special winding methods and insulations, assures a minimum of distributed capacity and leakage reactance.

UTC LINEAR STANDARD transformers are the ONLY audio units with a **GUARANTEED** uniform response . . . ± 1 DB from 20 to 20,000 cycles.

MINIMUM HUM PICKUP . . . is accomplished through the use of a hum balanced, semi-toroidal, coil structure which affords maximum neutralization of external fields. In addition, all units employ high conductivity outer case for maximum shielding. For very low level applications, units whose code numbers end in X employ multiple alloy shielding, making possible a transformer with extremely low inductive pickup.

NEGLIGIBLE WAVE FORM DISTORTION . . . is a function of proper impedance matching, minimum phase shift, and low flux density. These elements have been given great attention in the design of Linear Standard units. It is interesting to note that an output transformer reasonably flat from 20 to 20,000 cycles may show serious distortion at 30 and 10,000 cycles. For this reason, UTC high level units have a frequency range better than guaranteed value, generally 10 cycles to 50,000 cycles (see page 6).

MULTIPLE TAP WINDINGS . . . make possible a wide combination of impedance terminations without impairing fidelity or efficiency. Precision winding methods result in winding accuracy of .1% . . . perfect balance of inductance and capacity . . . exact impedance reflection.

DEPENDABILITY . . . is a function of external and internal structure. Linear Standard units are housed in rugged die cast cases of precise dimension with reversible mounting to permit above chassis or subchassis wiring. The solid terminal posts on low absorption bakelite are arranged in a circular layout so that a round chassis hole will clear all terminals. Coils are vacuum baked and impregnated. **Semi-hermetic sealing** is accomplished through the use of a high adhesion compound poured through the large opening opposite the terminal board after controlled preheating of the unit for full compound penetration.

LS OUTPUT TRANSFORMERS THE FINEST

While the UTC Linear Standard line is generally designed for a flat response from .20 cycles to 20 Kc., a much wider response is required for output transformers. As is noted in the first curve below, typical UTC output transformers are down less than 1 BD at 10 cycles and less than 1 DB at 40 to 60 Kc. Because of this, a fine power output curve is possible. (Second curve.)
The third figure below illustrates square waves obtained with the LS-63 transformer in a "Williamson" Amplifier Circuit. Of particular interest is the short rise time, which is far superior for UTC transformers than any standard make which we have measured.

In choosing power components for broadcast and commercial equipment, the first factor to be considered is dependability. Linear standard power components are very conservatively designed for maximum reliability. Designs provide for low temperature rise, 40°, and high insulation safety factors. Only the finest of materials and workmanship are used throughout.

The low power components of the Linear Standard series are housed in the familiar rectangular LS case with top or bottom mounting facilities. High power components are housed in end castings which completely protect the winding, while directly exposing the laminations for maximum heat transfer.

All units have a deep grey finish to obtain the highest heat radiation coefficient. Large components (up to 250 KVA) are housed in oil tanks.

HIPERM ALLOY TRANSFORMERS

The UTC Hiperm alloy audio and power transformers are specifically designed for portable and compact service. While light in weight, neither dependability nor fidelity has been sacrificed. The frequency characteristic of the Hiperm alloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hiperm-alloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Prim'y shown is maximum unbalanced.

ULTRA COMPACT AUDIO UNITS

The **UTC Ultra compact** audio units are small and light in weight, ideally suited to remote amplifier and similar compact equipment. High fidelity is obtainable in all individual units, the frequency response being ± 2 DB from 30 to 20,000 cycles.

All units except those carrying DC in Primary employ a true hum balancing coil structure, which combined with a high conductivity outer case, effects good inductive shielding. The die-cast case provides for top or bottom mounting. Maximum operating level +7 DB.

SUBOUNCER UNITS
FOR HEARING AIDS...VEST POCKET RADIOS...MIDGET DEVICES

UTC Sub-Ouncer units fulfill an essential requirement for miniaturized components having relatively high efficiency and wide frequency response. Through the use of special nickel iron core materials and winding methods, these miniature units have performance and dependability characteristics far superior to any other comparable items. They are ideal for hearing aids, miniature radios, and other types of miniature electronic equipment.

The coils employ automatic layer windings of double Formex wire . . . in a molded Nylon bobbin. All insulation is of cellulose acetate. Four inch color coded flexible leads are employed, securely anchored mechanically. No mounting facilities are provided, since this would preclude maximum flexibility in location. Units are vacuum impregnated and double (water proof) sealed. The curves below indicate the excellent frequency response available. Alternate curves are shown to indicate operating characteristics in various typical applications.

SUB-SUBOUNCER UNITS

UTC Sub-SubOuncer units have exceptionally high efficiency and frequency range in their ultra-miniature size. This has been effected through the use of specially selected Hiperm-Alloy core material and special winding methods. The constructional details are identical to those of the Sub-Ouncer units described above. The curves below show actual characteristics under typical conditions of application.

OUNCER AUDIO UNITS

STANDARD AND PLUG-IN TYPES

UTC OUNCER components represent the acme in compact quality transformers. These units, which weigh one ounce, are fully impregnated and sealed in a drawn aluminum housing ⅞" diameter . . . mounting opposite terminal board.

Ouncer items are ideal for portable broadcast, hearing aid, aircraft, concealed service, and similar applications. High fidelity characteristics are provided, uniform from 40 to 15,000 cycles, except for 0-14, 0-15, and units carrying DC which are intended for voice frequencies from 150 to 4,000 cycles. Maximum level 0 DB.

"P" series units are identical to the UTC OUNCER units but are sealed in bakelite housings with plug-in base to fit standard octal socket. While of submersion proof design, these units weigh but two ounces. Oversize pins in the base make it impossible to dislodge these units from their sockets.

NEW "M" TYPE TOROIDS MAXIMUM Q MINIMUM SIZE

UTC Permalloy Dust Toroids have been the standard of the industry for over 15 years. The **MQ series** of coils provide the highest Q factor in their class (see curves below), with miniaturized dimensions. All units are **hermetically sealed** to MIL-T-27 Specifications.

The **stability** is excellent. For the MQE-7 the inductance change is less than 1% for voltages from .1 to 3 volts The MQA-13 change is less than 1% for applied voltages from .1 to 20 volts. The MQB-5 change is less than 1% for applied voltages from .1 to 50 volts. DC is permissible through the coil (values listed below). Inductance is virtually independent of frequency temperature and vibration.

Hum pickup is extremely low due to the toroidal winding structure, with windings uniformly spread over the core. The case is of high permeability, affording additional shielding such that close spacing of units can be effected, the coupling attenuation being approximately 80 DB.

Other values of inductance than those listed are available on special order at the price of the next higher listed value

UTC type VIC variable inductors offer a revolutionary approach to the problem of tuned audio circuits. By adjusting a set screw in the side of the case, an inductance value of +90%, −50% from mean value is obtainable. Setting is positive. Effective Q for a wide frequency range and variation of inductance with applied AC voltage are shown on the illustrated curves, for a typical VIC unit.

The VIC inductor is housed in a rugged die cast case 1$\frac{11}{32}$" long, 1¼" wide and 1$\frac{7}{16}$" high with mounting centers on terminal board side 1$\frac{13}{16}$" by $\frac{29}{32}$". Weight is 5½ oz.

UTC standardized filters have been designed to take care of many present day filter requirements through stock units. The interstage type filters have a nominal impedance of 10,000 ohms, and lend themselves to effecting gain simultaneously with their frequency discrimination.

BMI units (Band Pass) have 2:1 gain. They are sharply peaked, having approximately 2 DB attenuation at plus or minus 3% from center frequency and attenuation of 40 DB per octave as shown. Input 10,000 ohms, output to grid.

HMI units (High Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at .67 cutoff frequency. Input and output 10,000 ohms.

LMI units (Low Pass) have a loss of less than 6 DB at cutoff frequency, and an attenuation of 35 DB at 1.5 cutoff frequency. Input and output 10,000 ohms.

HML (High Pass), and **LML** (Low Pass) filters are similar to the interstage filters, in all characteristics, except that they are intended for an input and output impedance of 500/600 ohms. **BML** (Band Pass) have input of 500/600 ohms, output to grid.

All of the standard filters are housed in **hermetically** sealed cases, shielded to reduce hum pickup to 150 MV per gauss at 60 cycles.

In addition to the stock filters listed, any of the six types are available as special units for any frequency from 100 to 12,000 cycles. Order by type followed by frequency, as LMI-2500, designating low pass interstage filter—2500 cycles cutoff frequency. These special units are priced at $35.00 net.

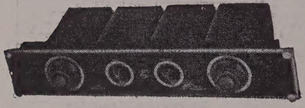
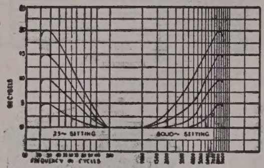
BROADCAST AND RECORDING EQUALIZERS AND FILTERS*

* 500/600 ohms



3AX UNIVERSAL EQUALIZER

The universal characteristics of the UTC 3AX equalizer have made it the most popular item for broadcast and recording equalization. This unique unit, with which most communications engineers are already familiar, is an accurately calibrated, quickly adjustable, combined low and high frequency equalizer. The low frequency controls include a switch for adjusting the maximum equalization frequency to 25, 50, or 100 cycles and a calibrated T-pad for exact adjustment of the amount of equalization. The high frequency portion of this unit includes a switch to set maximum equalization point at 4000, 6000, 8000, 10,000 or 15,000 cycles, and a similar calibrated control reading directly in DB. Equalization up to 25 DB available at any frequency selected.

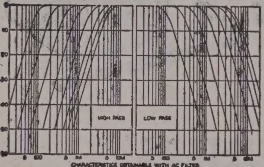


TYPICAL CURVES OBTAINABLE WITH 3A OR 3AX EQUALIZER

Through a unique arrangement of compensating pads, changes in adjustment of the 3AX equalizer do not affect the apparent aural level. This permits changes in tone color, with negligible change in volume. Where rapid changeover is required in service from one line to another, or from recording to play back, it is merely necessary to predetermine the required setting. The actual adjustment of the controls can be taken care of almost instantaneously. The construction is of the depressed chassis, etched panel, rack mount type. Thoroughly shielded against inductive pickup with UTC Trialloy Shielding. Dimensions of panel 3½" x 19". Depth 7½". Weight 15 lbs.

3A UNIVERSAL EQUALIZER

The 3A equalizer is identical to the 3AX described above, except that it does not incorporate the compensating pads for constant insertion loss. The insertion loss is roughly proportional to the amount of equalization employed. All other characteristics identical with the 3AX unit, this item weighs 10 lbs.

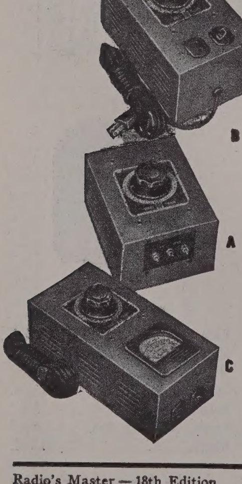


CHARACTERISTICS OBTAINABLE WITH 4C FILTER

4C SOUND EFFECTS FILTER

The use of filters to obtain unusual sound effects is now finding wide application in broadcast technique. The Model 4C Filter was originally developed for one of the large broadcast chains, and is now used extensively by most broadcast stations. Two controls are provided on the 5¼" x 19" panel, which is similar in appearance to the 3AX unit. The weight of the 4C unit is 20 lbs.

The low pass switch can be set for cutoff frequencies of 100, 250, 500, 1000, 2000, 3000, 4000, or 5000 cycles. The high pass switch has identical frequency points. The great number of cutoff frequencies provides for a wide latitude of tone control. If desired, though not normally necessary, external potentiometers may be inserted in the circuit for attenuation control.



UTC VARITRANS

The UTC Varitran is a simple autotransformer whose turns are arranged on one layer with the insulation removed so that every exposed turn may be used as a tap of the winding. A special non-fusing contact can be moved to any position on the winding, permitting the exact voltage desired to be obtained. The regulation

VARITRAN RATINGS

The Varitran autotransformer current and wattage rating is based at 115 volts. As the voltage is reduced, the wattage output is reduced correspondingly. The maximum current can be taken at any point from 0 to 20 volts and from 95 to 130 volts. Between 20 and 95 volts the current capacity tapers off from the two ends to approximately 60% of the rated maximum current at the 65 volt point. The mounting facilities are at both top and bottom of each unit to assure ease of mounting on panel, chassis or for laboratory bench service.

HERMETICALLY SEALED COMPONENTS

For over fifteen years UTC has been the largest supplier of transformer components for military applications, to customer specifications. Listed below are a number of types, to latest military specifications, which are now catalogued as UTC stock items.

Terminals on items H-20 through H-24 are neoprene-ceramic assemblies. All other units employ glass bead headers. Items H-1 through H-11 can, however, be supplied with neoprene-ceramic terminals where required. To so order, specify the type number followed by NC (H-1 NC, etc.).

The **frequency response ratings** are based on military requirements. Actually, most of the units that do not carry DC are appreciably better in response than the range shown.

The **level ratings** are maximum level for reasonable distortion at the lowest frequency specified. For higher frequencies considerably higher levels are permissible.

The **impedance ratings** are listed in standard manner. Obviously, a transformer with a 15,000 ohm primary impedance can operate from a tube representing a source impedance of 7700 ohms, etc. In addition, transformers can be used for applications differing considerably from those shown, keeping in mind that impedance ratio is constant. Lower source impedance will improve response and level ratings . . . higher source impedance will reduce frequency range and level rating.

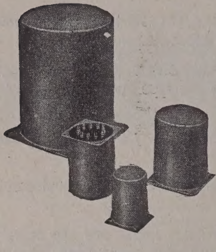
COMMERCIAL GRADE COMPONENTS



The commercial grade series of transformers incorporate conservative design and rugged construction to assure dependability under continuous service operation in industrial and commercial grade communication equipment. These units are mounted in uniform drawn cases finished in light grey enamel, and intended for chassis mounting. All items are poured with special sealing compound in addition to vacuum impregnation of coil structures. Type numbers are identical with the PA units except for the prefix "CG."

CG-134, 135 and 136 are of the hum-bucking type to assure low hum pick-up. All audio components are linear. ± 1½ DB from 40 to 10,000 cycles (no unbalanced D.C.), except CVL and CVM units . . . 40 to 6000 cycles. Parallel feed low level interstage units with 50,000 ohms and .25 mfd. 200 ohm windings on input transformers are balanced and may be used for 150 to 250 ohm circuits.

NEW UNIVERSAL INTERSTAGE EQUALIZER—CGE-1A

The UTC CGE-1A is the ideal device for any application where frequency response control is desired. Incorporating the latest developments in design and manufacture, this new unit provides the ultimate in control and flexibility. This equalizer is not a simple R-C tone control, but employs resonant circuits in a unique arrangement providing equalization characteristics unobtainable by conventional circuits. Designed to work from a low or medium impedance source (0 to 20,000 ohms) to a high impedance (500,000 ohms or open grid), the CGE-1A affords continuously variable equalization over a 30 DB range at either end of the spectrum, while introducing only 18 DB total insertion loss. (See curve above). Complete independence of high frequency and low frequency controls permits a wide variety of settings without affecting the over-all volume level. Because of its low insertion loss, this unit may be incorporated directly in many amplifiers. If existent gain is low, a single medium-mu triode stage will provide both proper gain and source impedance. (See circuit on centerfold, page C.) The mechanical construction permits mounting with case on panel directly behind controls, or with case separated from controls and panel. An etched, calibrated panel is provided.

DYNAMIC NOISE SUPPRESSION-INDUCTOR

Incorporates two accurate High Q coils [.8 hy. and 2.4 hy.] for use in dynamic noise suppression circuits. Excellent circuit accompanies unit.

If two speakers of different impedances are connected in parallel, the lower impedance speaker will develop greater power. If connected in series, the higher impedance speaker will develop greater power.

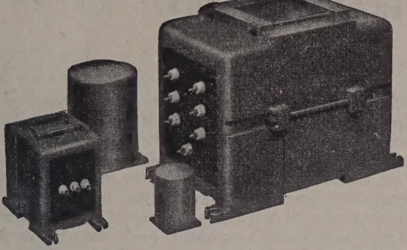
COMMERCIAL GRADE COMPONENTS

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases



CG VARIMATCH MODULATION UNITS

Will match any modulator tubes to any RF load.
The ever increasing number of vacuum tubes available for audio and RF applications has increased the difficulty of obtaining transformers suitable for matching to the various correct tube loads. If a standard transformer having a limited impedance range is purchased and used for a specific purpose as the "nearest thing" available, comparatively high distortion is inevitable. While a 20% mismatch caused by such an occurrence does not represent a serious loss in power, it greatly reduces the undistorted power available from a class B modulator because optimum plate load is not reflected to the tubes. The UTC Varimatch transformer eliminates this difficulty through the use of a combination of tapped windings affording an extremely wide range in impedance matching. Designs provide that for any load impedance employed, full class C plate current can be carried by secondary winding

UTC Special Series transformers are specifically designed for amateur and popular-priced PA service. The Special units are finished in a rich, commercial type medium gray enamel. A recessed terminal strip is provided permitting above chassis or breadboard wiring in addition to standard chassis type wiring. The universal windings provided on driver, matching and output transformers assure a maximum of flexibility. Modulator output units will carry the DC current of the class C stage for any of the impedances available and will match practically any audio tubes to any RF load within the power rating of the transformer. Large components are housed in formed cases with top or bottom mounting. All units are vacuum impregnated—compound filled.

SPECIAL SERIES POWER EQUIPMENT

UTC Special Series power supply components are designed specifically for amateur and popular-priced PA service. The ratings are based on such applications and recommended for ICAS intermittent use. For commercial application, GG or LS grade components should be employed. Tapped coil structures on power, and bias supply transformers afford maximum flexibility, permitting a given transformer to be used with many circuits and types of tubes. Stand by service should not be obtained by interrupting high voltage center tap.

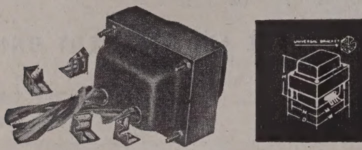
REPLACEMENT TYPE COMPONENTS

(PREVIOUS POWER TRANSFORMERS TYPE R-1 THRU R-13 AND R-54 WILL BE AVAILABLE UNTIL 1951)

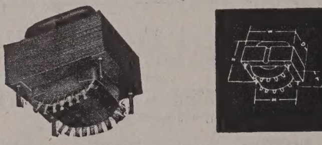
The UTC replacement type transformers represent the culmination of years of development in this field. All units are vacuum sealed against humidity with special impregnating materials to prevent corrosion and electrolysis. Shells and brackets are finished in attractive high lustre black enamel.

The UTC shells and universal brackets employed make possible a latitude in mounting dimensions never approached heretofore. A minimum number of transformers have been developed to cover any requirement in the replacement field. Pri. 117V. 50/60 cycles.



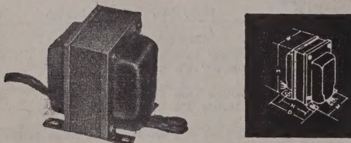
DOUBLE SHELL TYPE

The universal feet may be used for upright or horizontal mounting, or eliminated for flush mounting.



SINGLE SHELL TYPE

UTC flush type transformers are husky units designed for low temperature rise and good regulation. The rugged solder terminals permit ease of circuit change for the experimenter.



VERTICAL SHELL TYPE

UTC vertical power transformers are unusually attractive in appearance, having smooth drawn cases finished in high lustre black enamel.

CHANNEL FRAME TYPE

Channel frame chokes and audios are conservatively designed. Standard black enamel mounting channels are employed. Coils are tropic-sealed by vacuum-pressure method.

LINE VOLTAGE ADJUSTERS WITH METER

The perfect answer to abnormal or fluctuating line voltage. Adjust switch so that meter reads at red line and you know that your equipment is working at correct voltage.

These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly. The nine tap switch provides for line voltages of 60 to 140 volts on 115 volt output models and 160 to 240 volts on 230 volt output models.

All units are designed for 50/60 cycle service and come complete with 6 foot input cord and plug and outlet receptacle.

CHICAGO PUBLIC ADDRESS RANGE AUDIO TRANSFORMERS

Frequency Response within ±1 db, 50 to 10,000 Cycles

Driver and output transformers in this CHICAGO series are designed for three general power levels to fit a wide range of application. Up-to-date secondary impedances match 600 or 150-ohm lines, 16, 8, and 4-ohm speakers. (16/8/4-ohm taps also suitable for 20/6/3.2-ohm speakers.) Output transformers have tertiary windings for 10% inverse feedback that minimizes distortion and provides extra audio watts without loss of fidelity.

Splatter Chokes for High Level "Clipper" Filters

Can withstand high peak voltages. Has tapped windings to cover an inductance from .02 to 1.5 henries at relatively constant Q. Eliminates splatter, caused by heavy modulation; limits band width to 3,000 cycles, effectively increases "get through" ability of phone signals, and prevents negative peak clipping.

Low Pass Filter No. LPF-1

For attenuating frequencies above 3,000 cycles in low level speech amplifiers. Operates out of a 15,000 ohm source, *e.g.*, the plate of 6C5, 6J5, etc. when its 60,000 ohm secondary is connected to an equal impedance output. Operates at signal levels up to −8 db. Complete with operating instructions. S type mtg. Case size 13. (See pg. N-54).

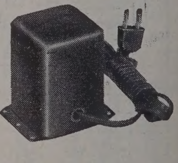
ISOLATION TRANS-FORMERS



CHICAGO Isolation Transformers are designed for a dual purpose: (1) To supply 115 volts isolated from a line of above/below normal, or normal, voltage—primary switch sets for 125/115/105 volts, 50/60 cycles; or (2) For use in servicing to eliminate shock hazard, by isolating chassis ground from line ground (particularly important on "hot" AC-DC television sets). Also provide 125 and 105 volts on the secondary for locating doubtful tubes, etc.

HIGH FIDELITY COMPONENTS

INPUT TRANSFORMERS

Modern high fidelity broadcasting and transcription apparatus require the utmost performance and reliability in the audio transformers used in their circuitry. The Freed "Quality Grade" audio transformers are wide band, high fidelity components featuring astatic construction, longitudinal balance, low harmonic distortion, uniform response, high efficiency, and constant impedance match throughout the audio frequency spectrum. Maximum neutralization of stray fields is accomplished by use of humbalanced coil structures and multiple alloy shielding. High fidelity is achieved on every tap of universal impedance winding without line reflection of transverse coupling.

All Quality Grade Components are thoroughly impregnated in a special non-hygroscopic varnish, and fully encapsulated in a moisture proof, high-melting point compound.

HERMETICALLY SEALED PULSE TRANSFORMERS for use in blocking oscillators, low level interstage coupling, and modulator outputs. Made in accordance with MIL-T-27 specifications. These pulse transformers are designed for maximum power, efficiency and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse charactertistics, voltages and impedance levels will depend upon interconnections made.

MICROTRAN®

hermetically sealed transformer

These ruggedized military type units were developed to meet demands of a growing miniaturization program.

All units are available from stock in hermetically sealed cans, although open frame units may be ordered. Open frame units are Resin impregnated to provide thorough protection from adverse climatic conditions and are supplied with flexible 4″ color cooded leads.

Also available on special order for MIL applications are standard MIL type cases.

MODULATION TRANSFORMERS—THE "FIVE" SERIES

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two indentical secondary windings, permitting series or parallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

FILAMENT TRANSFORMERS—THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designated. All have 117 V. 50/60 cycle primary.

STACO Transformers are compact and modern in design. Only the highest quality silicon lamination steel is used which assures cool operating transformers. Each coil is layer wound with the best quality enameled wires, each layer is insulated with heavy insulating material, each coil is varnished impregnated and high temperature baked. High Voltage Breakdown Test is performed on each coil and transformer in accordance with existing RMA Specs. This combination of high quality materials plus the finest workmanship is assurance of better and lasting performance at highest operating efficiency, yet costs no more than average.

Finishes: Mount type #1, Black baked enamel, Mount type #2, Black baked enamel, Mount type #3, Natural Buffed Aluminum, Mount type #4, Black Wrinkle baked enamel.

FERRANTI TRANSFORMERS

This group of transformers are hermetically sealed in standard Mil-T-27 case sizes, and are designed to meet the full requirements of the Mil-T-27 specification. They provide the highest standard of quality necessary for professional and military requirements.

The range includes the specific types standardized by the Armed Services Electro Standards Agency for universal military use, as well as a group of standard types for 400 cycle power supplies.

Use of these standard high quality components in experimental equipment will avoid the necessity for redesign for production.

Military Standard Audio Transformers

The Armed Services Electro Standards Agency has specified these types of audio transformers for universal military use. All units are hermetically sealed in Mil-T-27 case size AJ and are designed to meet the full requirements of the Mil-T-27 specification.

Use of these standard units in equipment at the experimental stage will avoid the necessity for redesign for production.

See dimension chart for AJ case details.

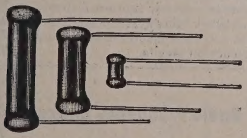
Fixed Ceramic Capacitors



Mallory tubular, fixed, ceramic capacitors are manufactured in 3 types. UC is general purpose type for by-passing, coupling and other applications where a moderate capacitance change with temperature change can be tolerated. ZT is zero temperature type, the nominal capacitance of which remains substantially constant over a temperature variation from −55°C to 85°C. NT is negative temperature type with a negative coefficient of 750 parts/million/degrees C. These capacitors are supplied with a dipped phenolic insulation for protection against moisture and have radially placed bare, tinned-copper leads approximately 1¼″ long.

Voltage Rating—600VDC.

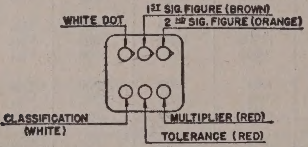
Instructions for use of RTMA Color Code

Hold capacitor with arrow pointing to right. From left to right, the first dot shall always be white to indicate standard RTMA molded mica capacitor. The second and third dots become the first two significant figures in the capacitance. The second row is read from right to left. The lower right dot should be the multiplier. The lower second dot indicates the tolerance and the lower left dot indicates the class.



Example shown above = 1300 mmfd. ±2%, 500 V.W.

The key to color significance is as follows:

Color	Sig. Fig.	Mult.	Tol.	Class.*
Black	0	1	±20%	A
Brown	1	10		B
Red	2	100	± 2%	C
Orange	3	1000	± 3%	D
Yellow	4	10000		
Green	5		± 5%	
Blue	6			
Violet	7			
Gray	8			I
White	9			J
Gold		0.1		
Silver		0.01	±10%	

* Denotes various electrical characteristics.
Voltage ratings vary with capacitance as shown in RMA Specification—April, 1946.

Tubular units encased in aluminum containers especially suited for compact assemblies. Single element units have solid wire leads. Dual, triple, and quad units are supplied with stranded wire leads and safety sleeves.

The higher voltage listings meet the new radio and electronic circuit potentials, particularly in cathode-ray applications like television receivers and oscillographs.

PRS units are normally supplied with etched foil, but plain foil is available. High-purity aluminum construction. Vented for excessive gas pressures.

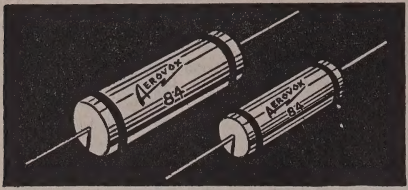
HI-VOLTAGE • TYPE 84 • TUBULAR PAPER CAPACITORS



Hi-voltage type 84 oil impregnated, tubular capacitors are compact high-grade units. Overall wax dipped for high resistance to humidity.
Units rated from 2500 VDCW and up are designed to meet the elevated peaks and transients encountered in television and other cathode-ray tube applications and to reduce the effects of corona.
These high-voltage units are encased in cardboard tubes with tinned wire leads, and have an improved end-seal for longer life under operating conditions to which they are subjected. Supplied with radial mounting band at no extra cost.

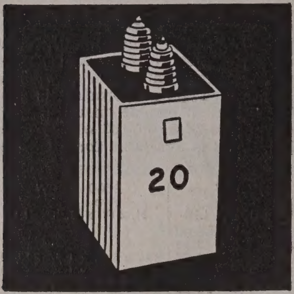
A compact superior-grade oil-impregnated, oil-filled, drawn-metal case capacitor. Hermetically sealed, immersion-proof. Built for severe operating conditions as in aircraft, police, broadcast, public address and other types of communications equipment.

The Aerovox-designed terminals are constructed with "doublerubber bakelite" insulators permanently riveted to the case, and make a sturdy, absolutely immersion-proof assembly.

TYPE 20 • HIGH VOLTAGE TRANSMITTER CAPACITORS



High quality oil-capacitors designed to meet the exacting service requirements of communications and electronic equipment, and general DC applications in industrial equipment. Single capacitors or parallel grouped capacitors available in ratings from 6000 to 50,000 VDCW. These units consist of precision wound, adequately insulated sections connected in parallel and assembled in heavy, welded copper bearing steel tanks, designed to expand or contract with changes in temperature. Finished in long lasting dark grey lacquer. Heavy duty, wet process porcelain insulator assemblies are gasketed, pressure sealed, and oil-filled to prevent internal creepage and corona. The assembled units are heat vacuum dried, vacuum impregnated with Aerovox Hyvol and hermetically sealed for long life under exacting, operating conditions. Single units rated at 30 KV or less are normally supplied with the capacitor element insulated from ground. Type 20 units not carried in stock but are built to order. Submit full application information when ordering.

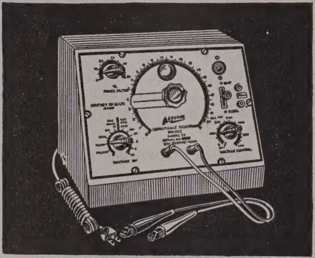
TEST INSTRUMENTS



Aerovox Capacitance and Resistance Bridge

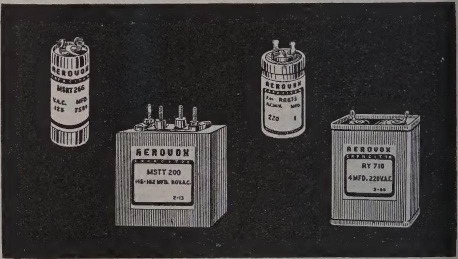
AEROVOX MODEL 76 Resistance Capacitance Bridge is the new postwar general-utility instrument combining simplicity of operation, remarkable degree of accuracy, and modest price. Extreme ruggedness makes it equally suitable out on the job, in the shop, or in the laboratory.

Sloping panel 10″ x 6″. Aluminum, etched and anodized. Steel cabinet, black crackle finish. All readings taken from main 4″ dial. Same calibrated scale eliminates trouble and chances for errors in reading. Linear scale, also an exclusive feature, means no crowding at high end to make readings difficult and inaccurate. Both the resistance and the capacitance readings are covered by six overlapping ranges, as against two or three in usual service instruments, for maximum sensitivity and accuracy. Positive "magic eye" indicator.

Here is what Model 76 bridge does: (1) Measures capacitance from 100 mmf. to 200 mfd. in six ranges. (2) Measures resistance from 10 ohms to 20 megohms in six ranges. (3) Measures power factor from 0 to 50%. (4) Provides D.C. polarizing potential for leakage measurements, from 0 to 600 V.D.C., continuously variable and calibrated in volts. (5) Checks leakage or insulation resistance.

Instrument is provided with shockproof, color-coded test leads fitted with banana plugs for panel jacks, and with clips. Instructions. Measures 10″ x 7¾″ x 8¼″. Weight 8 lbs. 3 oz.

Aerovox *Motor-Starting* Capacitors



A TYPE FOR *EVERY* APPLICATION

Aerovox motor capacitors are available in two general categories: (1) Exact-Duplicate Replacements, precisely matching the mechanical and electrical features of the original equipment; and (2) Universal Replacements, for a minimum stock of numbers taking care of the maximum range of motor applications. Exact-Duplicate Replacements do the "same-as-new" service job insisted upon by critical customers. Universal Replacements mean maximum convenience with minimum investment. And of course Aerovox also supplies the hardware, housings, caps, mountings.

Primary application is as an r-f bypass capacitor from line to ground in low voltage dc supply lines. Units are especially treated to assure extremely long, noise-free life.

Operating temperature range is minus 55 degrees C to plus 95 degrees C. For full 150 volt rating the operating temperature range is minus 55 degrees C to plus 50 degrees C. Units may be used at operating voltages up to 120 vdc over a temperature range of minus 55 degrees C to plus 71 degrees C; and 60 vdc over a range of minus 55 degrees C to plus 95 degrees C.

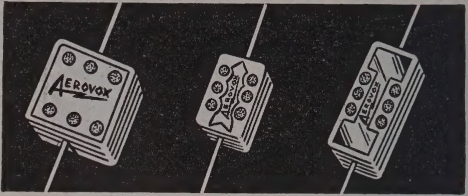
SILVERED MICA CAPACITORS



AEROVOX silvered mica units for most critical applications where precise capacity values are required. Encased in red low-loss bakelite. Similar in external appearance to standard bakelite molded mica units.

Available with temperature coefficient and retrace characteristics as defined by characteristics A to F inclusive of REC-115 and JAN-C-5 specifications for molded capacitors. Exceptionally high "Q." Mechanically protected against physical damage and changes in electrical characteristics due to varying atmospheric conditions. Wax impregnated externally. Ideal for circuits where inductance and capacity product must remain constant under all operating conditions.

AEROVOX RESONANT CAPACITORS

Again the radio-electronic art imposes still more critical capacitor requirements. This time it's adequate bypassing of IF circuits in order to keep IF frequencies from entering such circuits and causing troublesome squeals and howls. And Aerovox comes up with the new AEROVOX RESONANT CAPACITORS.

AEROVOX RESONANT CAPACITORS, Series RC, are now available in conventional paper tubular design, wax impregnated and wax sealed as follows:

CAT. #	MFD.	WVDC	O. D.	LIST
RC2	.05	400	½ d. x 1⅛	$.50
RC3	.1	400	½ d. x 1⅝	.65
RC4	.2	400	9/16 d. x 1⅞	.70

HI-Q DISK CERAMIC CAPACITORS

Hi-Q ceramic disk capacitors are available in a range of capacities from 10 mmf to 30,000 used for by-passing, blocking and coupling applications. They are sturdily constructed, precision tested, and moisture-proofed against high humidities. In many instances these Hi-Q disk capacitors offer advantages over the regular capacitors through their space saving features. Multiple capacities can be fabricated on single disks affording additional savings of space and installation costs. The silver electrodes are fired directly to the ceramic dielectric to assure low noise operation. They are coated with a non-hydroscopic phenolic and are impregnated with a micro-crystalline wax which protects the units from humidity and affords a sturdy construction.

CAPACITORS AEROVOX RESISTORS

HI-Q TEMPERATURE COMPENSATING DISK CAPACITORS

The temperature coefficient of ceramic capacitors is an inherent characteristic of the ceramic body. By controlling this coefficient, the use of ceramics has been extended to countless applications in the electronic and communications fields. Temperature coefficient is determined by the ceramic mix and therefore certain tolerances are standardized. Following is a list of standard recommended tolerances used in this listing:

Temp. Coef.	Tolerance—PPM	Temp. Coef.	Tolerance—PPM
NPO	+30	N330	±500
N080	±30	N750	±100

The tolerances shown are maximum deviation. The actual average temperature coefficient usually runs close to nominal. Aerovox Hi-Q is the first to offer temperature compensating capacitors in both disk and tubular styles as stock items.

Hi-Q temperature compensating disks are specifically suited for resonant circuit applications or any other applications where high Q and stability of capacity are essential. They meet all specifications of RTMA Class 1 fixed ceramic dielectric capacitors. These disks are unusually suitable for limited space applications. These capacitors are available from stock in the capacity ranges and tolerances listed below.

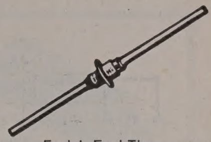
HI-Q TUBULAR FEED-THRU CAPACITORS



Eyelet Feed-Thru
Type EF

Hi-Q Feed-Thru Capacitors provide means to transmit thru shields or ground potentials and simultaneously by-pass unwanted frequencies. A good mechanical connection is provided by the silver-plated bushing. These are excellent dependable units even under severe mechanical vibrations as in aircraft, missiles and automotive requirements. All units are flash tested at 1250 volts D.C.

Hi-Q Eyelet Feed-Thru Ceramic Capacitors provide the ultimate in miniaturization. They can be soldered directly to the chassis and provide excellent by-pass performance where space is critical. Especially recommended for use in UHF.

HI-Q TUBULAR STAND-OFF CAPACITORS

Hi-Q stand-off capacitors are basically tubular, having as an integral part of their construction, a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for by-passing high frequencies.

All units are coated with a high temperature enamel, stamped for capacity and supplied with mounting nut, if desired.

The MCS is a quick mounting type which permits high speed mechanical installation. The ceramic tube is enclosed in a cadmium-plated metal case with a specially developed end seal for protection against humidity and temperature changes.

All units are flash tested at 1250 volts D.C. The power factor is under 3% and the installation resistance is above 7500 megohms.
